Preface

Welcome to the latest version of The University of New South Wales’ Analytical Centre Laboratory Software (ACLS); an indispensable tool for all researchers and users of the Mark Wainwright Analytical Centre. The software allows straight-forward management of more than 250 pieces of equipment with approx. 1000 users within the Analytical Centre at UNSW. The ACLS is feature-rich and has gained an enviable reputation within UNSW for reliability. This flexible software has also been incorporated it into the individual environments of other leading Universities within Australia and overseas.

Along with the inevitable minor improvements of the software there have been many new initiatives along with this year’s release including the creation of a Mobile App for the Apple iPhone. These new features build on the existing CONSOL, tracker/logger, and reporter/billing components, making one of the most comprehensive solutions for overseeing complex scientific instrumentation available.

These efforts have been only possible through the persistent dedication of the software’s chief developer Mr Dong Ming Zheng, who is always happy to receive input on new components, or suggestions on improvements, that may be incorporated into a future release of ACLS. I look forward to futures enhancements in the coming years.

A/Prof Mark Raftery
Director,
Bioanalytical Mass Spectrometry Facility.
Mark Wainwright Analytical Centre, University of NSW
Acknowledgements

The 2020 edition marks the twelfth edition of the “ACLS Complete Guide” which started in 2008. AC Lab System has evolved over the last 11 years, and the ACLS guide has evolved alongside it. In 2018/2019, we are continuing to enhance ACLS to deliver linked resource calendars, consumable order carts, my data access (UNSW only), onscreen excel for reports, 3 tiers school/org, 3 tiers resource groups, user data analysis tools and customised induction process.

I would like to thank A/Prof Mark Raftery who graciously wrote the preface of this edition. My thanks also go to Prof Peter Cumpson (Director of MWAC) and A/Prof Grainne Moran (Pro-Vice-Chancellor (Research Infrastructure), Division of Research) who have continued to support the ACLS. ACLS’ existence and success relies upon the entire MWAC staff vision, feedback, support, and encouragement. Furthermore, I’d like to give my thanks to Dr John Zhu and Dr Sean M. Langelier at MCN, Sandy Benness at Deakin, Dr Germanas Peleckis at UOW, Dr Michael Carnell and Dr Donald Thomas at UNSW, certainly, the entire ACLS community.

In the coming year, more features and capabilities will be implemented in accordance with the future plan chapter, and we are cooperating with UniLab to deliver digital and smart lab service MoxyCast, MoxyTouch and MoxyViewer.

I look forward to continue working with all of you to improve the ACLS.

Dong Zheng
ACLS Architect and Designer
Flashback

Over the past 12 years, a series of ACLS complete guide was published to record the growth of ACLS, and the great support of ACLS growing community.
### Table of Contents

7  Frequentely Asked Questions

7.1 Login and Logout

7.2 Online Registration

7.3 Booking

7.4 Group Booking

7.5 Update User Information

7.6 Update User Supervisors

7.7 Generate Data Reports

7.8 Generate Invoice Statement

7.9 Live ACLS Calendars to Presentation Screens and Touch Screens

7.10 Live ACLS Charts To Presentation Screens and Touch Screens

7.11 Moxy Service (Powered By UniLab)

7.12 User Profile Analyser

7.13 Video Player

7.14 Most Outage Resources

7.15 Most Training Resources

7.16 Most Popular Resources

7.17 My Pin board

7.18 Process Sample Jobs

7.19 Check-out Samples

7.20 Upload Sample Analysis Results

7.21 Training & Support

7.22 Conduct Survey

7.23 Analyse Publications

7.24 Google Analytics

7.25 Catalogue Resources

7.26 Generate Data Reports

7.27 Contact User

7.28 Invoicing Summary

7.29 Set Up Trainers and Certificates

7.30 Record User Forms

7.31 Store and Share Documents

7.32 Track Samples

7.33 Check-in Samples

7.34 Mobile Browser Version

7.35 Staff Comments on Users

7.36 iPhone App

7.37 Android App

7.38 Analyse Publications

7.39 Google Analytics

7.40 Catalogue Resources

7.41 Generate Data Reports
1 Introduction

Mark Wainwright Analytical Centre proudly presents the AC Lab System (ACLS): an web-based laboratory resource booking system (Booking capabilities include operation, user, training, commercial and service bookings), sample tracking, training certification, incident reporting, support ticketing, induction process, survey creator, Corea analytics, consumable tracking, publication registry, video and information management system. ACLS is modular in design, making it flexible and customisable. Users have the ability to access a range of resource and instrument information, enabling them to use the tools to make informed laboratory decisions. ACLS access can be authenticated either through a local authentication mechanism, or through an active directory (LDAP), or through AAF. As a user of ACLS you will be able to achieve:

- Online registration and activation
- Online registration pathway
- Project-based, account-based or resource-based billing scheme
- Option to collect either booking data or usage data through ACLS tracker for data processing and management
- Multiple event booking tools and multiple account/project options
- Booking confirmation and reminder produced with each booking, through iCAL, the booking calendar can be exported to local calendar programs, such as Outlook, Thunderbird, and MAC mail
- Linked resource calendars
- Multiple group sample tracking and reporting
- Email message broadcasts to user groups, staff groups, certificate groups and all supervisors
- Data reports and invoices
- Incident report and tracking
- Training and support ticketing system
- Survey creator
- Publication analyser
- ACLS iPhone and Android app
- Resource catalogue
- Laboratory doc access and administration
- Video access and administration
- Customised induction process
- Moxy service (powered by UniLab) integration to cast the live calendar and live dashboard to the indoor or outdoor screens, and also touch screen solutions for labs.
- Special plug-ins for:
  - bDRT: batch data report tool, an efficient tool to compile full data reports
  - bIST: batch invoice statement tool, an efficient tool to compile invoice statements
  - eDM: Excel data manager, to export user and system data information in excel files
  - iCAL: calendar sharing and export through iCAL protocol
  - iSurvey: survey creator, survey result analyser
  - iPublication: collect publications and analyse the collections
  - lDAP: active directory authentication integration through LDAP
  - MobileLight: web version for mobile phones
  - tEB: training event booking tool
1.1 Version Series

The latest web version is SQL 2.33.x

1.2 Internet Browsers

ACLS is tested and certified with the following major Internet browsers:

<table>
<thead>
<tr>
<th>IE</th>
<th>Edge</th>
<th>Firefox</th>
<th>Safari</th>
<th>Chrome</th>
</tr>
</thead>
</table>

For IE, please ensure that compatibility mode is disabled.

1.3 Customer Support

Should you have any feedback or require any support or assistance in running and operating the ACLS, please contact us at acl.s.analytical@unsw.edu.au or dm.zheng@unsw.edu.au.

1.4 News Channel

News channel is available for ACLS at http://news.acls.analytical.unsw.edu.au/. The channel provides the latest updates of the ACLS development, features and announcements.
1.5 Terminology

Over years, facility/tool is used to define the equipment, items. From 2018, resource is used to replace facility and tool in the ACLS. Through the guide, both facility and resource are equivalent in use.
2 System Installation

ACLS offers multiple applications:

- Web portal and application (mobile browser friendly), comprised of HTML codes, java scripts and PHP scripts for the web application, executive programs
- Server/client application - ACLS tracker
- Smart Phone applications: iPhone and Android app

2.1 System Requirements

2.1.1 Server Hardware

The **minimum** hardware requirements are:

<table>
<thead>
<tr>
<th>CPU:</th>
<th>Physical server: Intel i7 or above</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory:</td>
<td>Min. 8GB</td>
</tr>
</tbody>
</table>

2.1.2 Server Software

The software requirements are:

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Windows Server 2012 standard/enterprise (64 bit)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Windows Server 2016 standard/enterprise (64 bit)</td>
</tr>
</tbody>
</table>
2.2 System Installation

The order of installation for ACLS is:

- Web server
- PHP engine
- PostgreSQL engine
- System server

2.2.1 Web Engine

ACLS web portal certifies the Abyss Web Server for web service, and IIS for the smartphone app.

To install and configure ACLS, please refer to ACLS Installation Guides (provided on request).

2.2.2 Database Engine

ACLS runs on PostgreSQL 9.4 or the latest. To install and configure the SQL engine, please refer to ACLS site at http://www.analytical.unsw.edu.au/for-users/ac-lab-system.

2.2.3 Logon Server

ACLS Logon Server fulfils the following major functions:

- Communicates with ACLS Tracker to register the user login/logout details, user information, resource information, project and account information, booking information and live notification.
- Based on the system configuration settings:
  - verifies invalid user folders
  - verifies user photo availability.
- Ports 1024 and 35120 are reserved for network communication with ACLS logon client.
- Generates log files, which record all the tasks undertaken.
- The Logon Server refreshes the parameter Tracing_Data_Date in the system configuration settings each day or within 5 minutes after execution. If this does not occur, the ACLS System Administrator will be prompted with an error message each time he/she logs onto the system through the web interface. However, you can disable the logon server check through the parameter LogonServerCheck on Configure System.

2.2.4 Email Server

ACLS Email Server performs the following tasks:

- Transmits broadcasting messages and notices.
- Sends out booking reminders and notifications.
- Executes bDRT and bDIS operation upon activation.
• Executes **Training Certificate** validation process.
• The Email Server refreshes the parameter **Email_Data_Date** in the system configuration settings each day or within 5 minutes after execution. If this does not occur, the ACLS System Administrator will be prompted with an error message each time he/she logs onto the system through the web interface.

### 2.3 ACLS Tracker

ACLS Tracker is installed on resource computers to work with the ACLS Logon Server. If your lab opts for ACLS Tracker configuration, the provided installer of ACLS Tracker makes the installation straightforward. The tracker is written in JAVA and the JAVA JRE is bundled with the tracker installer.

The tracker supports Windows, Mac and Linux OS. To set up the server and tracker, complete the following:

#### 2.3.1 Server Settings

- Logon to ACLS through the web browser
- Add the resource or instrument through **Resource Wizard**, or
- Add the resource through **Resource Manager** and logon control through **Resource Console Manager**
- Verify the server firewall configuration to ensure the logon port **1024** and **35120** is **On** for the range of resource networks, for example, 10.1.1.0/24

#### 2.3.2 Tracker Settings

- Edit the **settings.conf** to replace the default server IP with your ACLS server IP
Following successful connection between the server and the tracker, the resource name will display on the tracker window.

If you are unable to view the correct resource name, please verify the resource settings through the web interface.

Refer to online documentation about the operation of ACLS Tracker at http://www.analytical.unsw.edu.au/for-users/ac-lab-system/acls-tracker-download
3 Getting Started

Before you start running ACLS, it is important to understand each of the functions and features, and what information you need prior to setting them up.

3.1 Navigating ACLS

You are able to navigate ACLS easily through two interactive menus: horizontal menu for major function access depending on access group, and vertical menu for individual function access on the left of the screen, click-expand and click-hide for sub-menus. The following snapshot is for admin view.

- Dashboard

- Booking
Staff

- User Profile
- Report Manager
- Invoice Manager
- Staff Resources
- Consumable Manager
- System Wizards
- System Settings
3.2 Selecting the Business Model

Prior to commencing using ACLS, you must consider which business model you will use to establish your laboratory. The business model determines how the rates will be applied to users’ bookings or usages, in other words, how to establish the cost centre for cost recovery of resource usages. Select one of the following business models:

3.2.1 Project-Based (Medical Labs)

The project-based model establishes the relationship between users and billing projects. The relationship includes supervisors, researchers, accounts, account contribution rate, charging rates and contents. The final billing process is tied to the user accounts. For further information, refer to the Operating ACLS chapter.

Project Manager is only available to the system configuration using ACLS Logon Console to form a closed-loop user log.

3.2.2 Account-Based (commonly used)

The account-based model calculates the rates according to the user accounts. The final billing is tied to the individual user accounts which include the account name, account type (internal or external) and the charging rate (if account-based policy is adopted). For further information, refer to the Operating ACLS chapter.

3.2.3 Resource (Instrument)-Based (commonly used)

The resource (instrument)-based model ties the actual billing to the resource (including instruments) charging rate rather than the account rate or project rate.

The billing is tied to individual user accounts. For further information, refer to the Operating ACLS chapter.

You can only select one business model per ACLS instance. Please refer to the Configuring ACLS chapter for further information.

3.2.4 Resource vs User Category-Based (ANFF MCN Customization)

This is a special modification for ANFF MCN. Please refer to Appendix A for details.

3.3 Authentication Access

There is a pre-defined accessing policy for each function as follows:

<table>
<thead>
<tr>
<th>Authentication Groups</th>
<th>Dashboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Administrators</td>
<td>Full Access</td>
</tr>
<tr>
<td>Administration Staff</td>

4 Registration

4.1 Select Login Name

ACLS provides three (4) options to set up a login name:

- The user's email address, e.g. xx@unsw.edu.au
- A short login name, e.g. abcd
- University-wide or organization-wide login ID upon enabling LDAP
- AAF via ACLS SSI (Refer to Appendix M)

The ACLS System Administrator has the power to configure the options of the login name types through Configure System.

4.2 Register Users Manually

User registration information can be entered manually or completed through online registration.

- For manual registration, only the system administrator and administrative staff can set up the registration information through User Profile Manager.

A user can be granted access to ACLS by the following:

- **Activate User Entry**: check this box to grant the user full permission to access the system. All staff members are empowered to use this.

Once all user registration details have been completed, click Accept to save the user information.
Following user registration or user reactivation, select the **Send Confirmation Email** option if you require a registration confirmation email notice or reactivation email notice to be sent to the user.

Only administrative staff or system administrators can register new users. User photos are optional and can be uploaded to ACLS. A user's access to ACLS may be deactivated due to the unavailability of a photo, depending on the configuration settings at **Configure System**. For further information on uploading a photo, refer to the **FAQ** chapter.

However, even if user access to ACLS is activated by following the above steps, you still need to complete the next step to permit a user access to ACLS:

### 4.2.1 Project-Based

Following the registration of a user, switch to **Project Manager** to add the user to one of the active projects. Users are unable to make any bookings or access the ACLS logon console on resource computers without being assigned to a project.

### 4.2.2 Account/Resource-Based

The account/resource-based registration option is similar to the project-based user registration. The difference is that you are required to establish a link to one or more accounts on the registration page.

Following the completion of user registration, go to **Account tab, Edit User Accounts** to make the account selection.

When you select **Edit User Accounts** you will be prompted to make a selection of valid accounts.

If you select the **Suspended** option the user account will be disabled. If you select the **Delete** option the user account may be removed, depending on whether the user ever uses the account for bookings or logs.
4.3 Register Users Online

ACLS controls the online registration by a process divided into the following stages:

- **User data entry**

  - **Terms & Conditions Compliance**

  - **School/Org selection/entry**

  - **Supervisor selection/entry**

**User data entry**

ACLS controls the online registration by a process divided into the following stages:

- User data entry
- Terms and Conditions Compliance
- School/Org selection/entry
- Supervisor selection/entry

**Terms and Conditions Compliance**

You can either select or enter a school or organization name.

**School/Org selection/entry**

You can either select or enter the supervisor's name.
- **User photo (optional)**

Upon clicking on "Upload Photo (JPG)" button, a popup window appears to upload the user photo.

- Once the photo is uploaded, the photo is shown for confirmation.
• **Account (optional)**

Depending on the selection, if it is internal, then 3-4 char fields are required to be entered. If it is external, then no further details need to be provided at this stage.

### Resource of interest (optional)

Depending on the online resource registration setting in **Resource Manager**, users can select the resource of interest.
• Confirmation and submission

The user is asked to confirm the registration details before making the final submission. Once the user clicks on **Submit**, the registration application process is completed. The user and relevant staff members will receive registration notices. Each registration comes with a unique reference number for future reference.

![Registration form](image)

Once the user clicks on **Submit**, the registration application process is completed. The user and relevant staff members will receive registration notices. Each registration comes with a unique reference number for future reference.

![Registration form](image)

• Approve online registration

Admin staff process the online registration through **User Profile Manager**. Click **Online Registration**. Click **Approve** to continue to the user registration page as stated in **Register Users Manually**, or **Delete** to cancel the registration.

• Auto-approve online registration

Some labs prefer having an auto-approving mechanism to ease the pain of user waiting for approval and reduce the admin work load. In response to the needs, ACLS has built an auto-approving mechanism which applies to the local organization users only. For example, for ACLS deployed at UNS, UNSW user registration feeds through the auto-approving process; for non-UNSW users, the registration process remains unchanged so lab admin needs to manually approve the non-UNSW user registration.

The auto-approving user registration only works when it meets the following conditions.

• Enable auto-approving function through system settings by system administrator
• ACLS connected to organization ID system via LDAP
The auto-approving process is illustrated as below. The current registration form wizard will stay unchanged except for the last step when users submit the form. Taking UNSW for an example.

For system administrator, 2 global parameters are required to set up for auto-approving.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EnableRegAutoApproval</td>
<td>If enabled, auto-approving process is ON.</td>
</tr>
<tr>
<td>OrgRegName</td>
<td>Organisation name for registration form, for example, UNSW</td>
</tr>
</tbody>
</table>

On the current page 1 of registration form, a selection panel is added to ask users if he is local org user or if he is not.

At the end of registration, if the user is UNSW staff or student (for example), ACLS pops up the sign in for credential confirmation before granting the access to the system.
4.4 Register Supervisors

A supervisor can be registered through Supervisor Manager.
4.5 Login to ACLS

Enter your login email and password and click on **Login**.

Upon login, you will see the **Booking Tab** page.
5 Configuring ACLS

5.1 Configure System

When you commence using the system, you **must** verify the parameters defined in the system configuration panel to ensure they are set out as required for your operations. Normally, ACLS is compiled and delivered in the configuration of your choice.

When ACLS is installed, the system configuration is set to default values. Go to **System Settings** and Select **Configure System** to make the following changes:

- CGI Directory: Directory for ACLS web access to retrieve the CGI files, including book.dll
- Data Directory: Physical directory location for all the system data files
- Server Name: The server IP or domain name (www.xxx.xxx.xxx)
- SMTP Server Name: The local SMTP server domain name
- Title To Show: The logon page title
- Title Beg & Title End: The web page title with format Title To Show.Title Beg.Title End

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>AccessPortalURL</td>
<td>Single Sign-In Portal</td>
<td>Refer to Appendix K</td>
</tr>
<tr>
<td>CGI Directory</td>
<td>Directory for ACLS web access to retrieve the CGI files, including book.dll</td>
<td>For example: if hyperlink is <a href="http://localhost/cgi/book.dll">http://localhost/cgi/book.dll</a>, CGIDirectory should be &quot;cgi&quot;.</td>
</tr>
<tr>

</tbody>
</table>
5.2 Configure Resources

Resource in ACLS refers to instrument, equipment, tool, device, or anything you wish to book. Before starting to set up resources, you need to work out the resource grouping strategy. In other words, you need to set up groups for similar kinds or capabilities of resources.

Resource Wizard:

This guides you through a ‘one-stop’ process to set up resources, taking 4 steps to complete. Simply follow the process step by step to set up a new resource or change resource settings.

Set Up Resource Group Ownership:

You should use this only if you have multiple units at your organization. By setting this up, each unit owner(s) or staff-in-charge can administrate their own resources, trainers and certificates.

Go to Utilities -> Resource Manager -> Resource Group.
Configuring ACLS

Click on button “Update Ownership” to add or update the ownership. Owners of the resource can be chosen from or above the equipment supervisor category only. Now the owners can manage their own resources, trainers and certificates.

Resource Manager:

An experienced administrator can jump to **Resource Manager** and **Resource Tracker Manager** to make changes. Resource manager indicates the certificate titles and trainers to each resource upon selection.
### Configuring ACLS

Booking resource refers to operational and active resources that open to accept bookings.

<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Resource Name</strong></td>
<td>Full name of resource</td>
</tr>
<tr>
<td><strong>Resource Group</strong></td>
<td>Resource group name</td>
</tr>
<tr>
<td><strong>Resource Image</strong></td>
<td>Resource image, one per resource</td>
</tr>
<tr>
<td><strong>Resource Type</strong></td>
<td>Following types are selectable. In the future, each type of resource has its own booking event template.</td>
</tr>
<tr>
<td></td>
<td>Research Equipment</td>
</tr>
<tr>
<td></td>
<td>Loan Item</td>
</tr>
<tr>
<td></td>
<td>Service</td>
</tr>
<tr>
<td></td>
<td>Meeting Room</td>
</tr>
<tr>
<td></td>
<td>Vehicle</td>
</tr>
<tr>
<td></td>
<td>Others</td>
</tr>
<tr>
<td><strong>Catalogue Access</strong></td>
<td>Catalogue access defines the access level by the following definitions.</td>
</tr>
<tr>
<td></td>
<td>Local</td>
</tr>
<tr>
<td></td>
<td>Organisation</td>
</tr>
<tr>
<td></td>
<td>Universe</td>
</tr>
<tr>
<td></td>
<td>Disable</td>
</tr>
</tbody>
</table>
Configuring ACLS

Booking resources and non-booking resources are processed separately. If the Resource Charging Scheme is selected in the system configuration, you will be prompted to enter the charge rate for both internal and external accounts.

In the example below, the internal accounts are UNSW accounts.
Booking resource refer to operational and active resources that open to accept bookings.

A chart of booking and non-booking resources is available to give you a complete view of each resource setting.

<table>
<thead>
<tr>
<th>Booking Resource</th>
<th>ChargeHour (3): UNSW Account</th>
<th>ChargeHour (3): (External Invoice)</th>
</tr>
</thead>
<tbody>
<tr>
<td>AFM_Catalyst (Low)</td>
<td>48.00</td>
<td>48.00</td>
</tr>
</tbody>
</table>

Booking Form:

Booking form might be used to record metadata of booking sessions while users make bookings. You are able to set up max up to 5 booking forms with the following entries. The forms can be set as optional to be completed and uploaded on the booking calendars.
Configuring ACLS

For unapproved bookings, staff can validate the uploaded forms before granting the booking or decline.

On the booking calendar page, staff can access the booking forms anytime.
3 tiers resource group structure

3 tier resource group structure is implemented. For example, you can set up School of Biology/Analytical Centre/ICP Lab. The benefits for 3 tier structure are to make the resource administration more structural and easier to set up better structural list for calendars.

Tracker Configuration:

Set up the console controls using the Resource Tracker Manager.
There are two ways to set up a resource ID to connect to the ACLS Logon Server: by its network IP address, or its Host ID generated by the console. The following parameters are required for setting up the console control:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resource</td>
<td>Resource installed with console</td>
</tr>
<tr>
<td>IP Address:</td>
<td>TCP IP addresses for the instrument login computer; You can set a pseudo one if you decide to use booking data for reporting only.</td>
</tr>
<tr>
<td>Host ID:</td>
<td>Host ID shows at each console upon installation. System generates a random one the very first time.</td>
</tr>
<tr>
<td>ID Type:</td>
<td>Either IP as resource ID or Host ID as resource ID.</td>
</tr>
<tr>
<td>Connection Allowed:</td>
<td>ON/OFF.</td>
</tr>
<tr>
<td>Note</td>
<td>Notes relating to the console settings.</td>
</tr>
</tbody>
</table>

### 5.3 Access Group Definition

The **Access Group Manager** defines the level of access. There are 7 **generic** groups pre-defined in the system:

- System Administrator Group
- Administrative Staff Group
- Manager Group
- Equipment Supervisor
- General Staff Group
- Supervisor Group
- User Group

Each **generic** group can be used to create many sub-groups for different booking settings.

Each group has the following attributes:
Configuring ACLS

- Group name
- Maximum hours per day
- Maximum days per period (calendar days)
- Maximum hours per period
- Booking start time for each day
- Booking end time for each day
- Booking end time offset for each day. If set to zero, ACLS will set one check box on the booking calendar to represent the offset period on the booking end time
- Booking cancellation: Whether the bookings are allowed (one day in advance) to be cancelled
- Weekend booking: whether weekend booking is permitted
- Group code: unique group ID
- Group of Privilege: access authentication

5.4 Upload System Files

Through this file uploading function, you are able to upload all the following files:

- Banner image
- Logo image for invoice statement
- Terms & Conditions text file
- Terms & Conditions PDF file
- Customized user title text file
- Customized type of researcher text file
- Customized form type text file (CMCA only)

For example, a user position text file should look like this:

- Undergrad. Student
- Hons Student
- Visiting Researcher
- Masters Student
- PhD Student
- Postdoc
5.5 Configure Email Receivers

You can customize the email notice receivers for an online registration request, budget manager, access denied and training & support. By default, an online registration notice, access denied notice and training & support notice all go to both the user who submits it and the email address set out in Contact Us shown in the footer.

5.6 Configure Email Response Contents

You can customize all email notice contents to suit your lab environment. If you don’t set your own content, the system uses the built-in default content.

Modified content is clearly identified, the rest are labelled as default. The system provides Preview and Default buttons to enable you to see the difference. If you erase the modified contents, then the default settings will turn on automatically.
5.7 Configure Data Links (UNSW Only)

The objective of this function is to implement the future experiment data secured access and sharing (FTP is no longer supported). There are 5 functions as follows:

- Set up data access:

  Through this function, you can set up data access with mCloud service powered by @FileRun.

  Go to **My Data** to access, the snapshots are available here. Please contact us if you wish to know more about this data management service integrated with ACLS.
ACLS + mCloud is mobile browser ready.
• Registration Link:

Labs might go with the PDF forms for online registration instead of the built-in ACLS reg forms. In this case, you can set up the external URL to point the registration to your own web page.

![Configure Data Links]

```
URL:
Accept
```

• Resource Link:

• Labs may provide additional information about resources, status, maintenance plan and more on separate websites. You can make these available to users at every booking page and resource status page.

![Configure Data Links]

```
Reference: Choose resource from the list.
URL:
Note:
Accept
```

• The external resource information is shown on Resource Status page.
Configuring ACLS

- Net Drive:
  - This needs to work with the ACLS logon console program, which is installed on the resource (research equipment) computers. If you set this up, then when the user logs on to the resource computer, the console dynamically maps the network drive as pre-defined so that users can save the results to the network data storage devices.
  - You need to define the following parameters for the console to connect with the network drive as follows:

    - Drive: telling console what drive label is used for connection, don’t use C to G as most Windows computers use these for local drives
    - Folder: as a protocol of network drive mapping, you should set out the full path as standard
    - User Name: authentication of connection
    - Password: authentication of connection
    - Per Resource: No longer in use.

- For further information on net drive configurations, please refer to Appendix H.

5.8 3 tiers school/org structure

3 tier school/org structure is implemented. For example, you can set up DVCR/MWAC/BMIF. By doing so, you are able to move to next step to deploy org structure diagram and analytical tools for user population and distribution.

You set up Univ A/Faculty B/School C, Univ A/Faculty B/School D, now you need to rename Faculty B to Faculty F, this change will apply to all in school manager.

To disable the unwanted school or org, you can click on Archive button any time.

6 Operating ACLS

6.1 Dashboard

Depending on your access group defined in your profile, Dashboard offers a wide range of information about your work and your profile in ACLS, and quick access to resource status and the other functions:

- **My Attention (Admin Only):**
  - User registration pending approval
  - Active user without account
  - Active account expiring within one month
  - Project expiring within one month

- **My Home:**

![Dashboard Image](image-url)
Lab Events: shows the events in the current month, you can click on month link to view monthly events
Access Documents: Access to general documents (policy, meeting minutes, etc.), and resource related documents (training materials, etc.)
Access Forms: Access to user’s form, such as induction form, OHS form, etc.
Access Experiment Data: Depending on ACLS configuration, you may be able to access the experiment data through the FTP service through the links
Access Invoices
Access Sample Job Reports
Access Sample Job Summary

My Profile:

My profile shows the full details of the login user profile. User can change password and update contacts. There are two ways to access My Profile, via Dashboard, or via user photo next to Logout.
My Publication:

For each lab, unit, facility and institute, publications are critical elements to support grant applications and to provide evidence of the excellence of the service.

An example of the publication data is shown on the registration form as below.

- Publication ID
- Journal Title
- Author List
- Year
- Month
- Details
Operating ACLS

Staff can register publications for any users.

- When done, you can see all your registered publications upon clicking on Publication.

- Approve Bookings:
  - Bookings pending approval provided that you enable the pre-approval booking setting
  - Available to trainer only

- My Usage:
  User can zoom in to the usage: booking and tracking. ACLS provides both usage summary in tables and bar charts.
6.2 My Calendar

My Calendar captures all the bookings of “mine” onto one calendar.

Staff members can view any user and staff booking calendar. **All Staff Calendar** shows all the staff bookings on one calendar, and for example, it can assist staff and managers to quickly identify free time for staff meetings.

**All Service Calendar** provides all the service bookings across all the resources on one calendar. You can also view single resource service bookings by selecting the resource from the dropdown list.
6.3 Make Bookings

Click on **Booking Tab** from the ACLS navigation menu, and the resource list shows up selections depending on your certification status. For general users, you see the resources that you are certified to access.

**Sorted by resource group:**

**Sorted by individual resource:**
On the Booking Calendar, there are 6 bookings tool tabs available for staff members. General users can only access Resource Booking tool and book for themselves.

### 6.3.1 Operation Booking

Operation Booking is used to book events for yourself. The color scheme gives you a quick presentation about the different types of bookings. The system blocks past dates in blue, as you are not permitted to book the past. You can easily navigate the calendar to day and week view by clicking on Date serving as the active link. List view shows you a summary of bookings made in the selected month.

You are able to print the calendar in PDF in any view by clicking on the PDF button. Go to Filter By to view individual user bookings if there are too many bookings on the calendar page.

- **Add bookings:**
  - Click on orange round + button to add
- Alternatively, double click or single click on the selected date on the calendar to add bookings.

<table>
<thead>
<tr>
<th>AFM CATALYST (LOWY)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
</tr>
<tr>
<td>Notes</td>
</tr>
</tbody>
</table>

Repeat event: DISABLED

- Click on ‘OK’ to save the bookings instantly.
- Each booking tool comes with its own template but the method of creating, editing and saving bookings is the same.

- Business hour indication:

  Click on Booking Quota button to view the details with the fly-in slide.
6.3.2 User/Approve Booking

This booking tool is only available for staff to book for any users excluding staff members, or to approve any pending bookings. When you click Save, the system sends the booking confirmation notice to the booked user and the staff member who has made the booking.

6.3.3 Training Booking

This booking tool enables staff to book a training session for users. The difference between user booking and individual training booking is that a user booking is regarded as a normal operation booking (similar to Resource Booking), and a training booking shows as training in the report.

When you click Ok, the system sends the booking confirmation notice to the booked user and the staff member who has made the booking.

6.3.4 Group Booking

This booking tool allows staff to book events or sessions for multiple users at one time. When you click Ok, the system sends the booking confirmation notice to the booked users and the staff member who has made the booking.
6.3.5 Commercial Booking

Commercial booking is only available to staff members and is used to book a resource for special commercial operations.

6.3.6 Service Booking

Service booking is only available to staff members, allowing them to book resources if they require maintenance or service. The service bookings will overwrite any users’ bookings, and email notifications will be automatically sent to the users of any bookings cancelled due to resource servicing.

To overwrite current bookings, you need to create a new service booking taking the same time as the current bookings, then click on Ok to save the service booking and the system automatically removes any conflicted current bookings.

Service Booking is used to book service events. Simply drag the booking box to the time you wish to make the service booking and the system will replace those earlier bookings when you click on Ok button.

The service booking tool includes two types of services:

- Scheduled: used for planned or scheduled maintenance, service, etc
- Unscheduled: used for unexpected and sudden resource breakdown service
All the service bookings are open for changes, be in the past or to the future. They are coloured green to indicate that you can make changes or delete the service bookings.

6.3.7 Display Account in Booking Body

This selected account to make the bookings are shown in the booking body.
Regardless of the account number, account selection page always pops up to ask user to confirm before proceeding to the calendar page. This is option in System global setting to enable or disable the compulsory account selection.

6.3.8 **About Offset Setting behaviour in Calendar**

The offset time concept rises from the need to book a block of time after normal business hours. For example, business hours are from 9am to 5pm: if you set offset time as 3 hours, it means the time from 5pm to 8pm must be booked in a block. Offset time mechanism applies to a special situation as stated in the case study. Overnight booking is one of the situations you need to set this up for. In most cases, you don’t need to use it.
By checking the block time box, you can book from 17:00 to 20:00 in one go. Offset time works well for overnight booking events.

**Case 1:**

<table>
<thead>
<tr>
<th>Booking start time</th>
<th>8am</th>
</tr>
</thead>
<tbody>
<tr>
<td>Booking end time</td>
<td>6pm</td>
</tr>
<tr>
<td>Offset</td>
<td>4 hours</td>
</tr>
<tr>
<td>Description</td>
<td>The above setting is the same as below: Booking start time: 8am Booking end time: 10pm</td>
</tr>
</tbody>
</table>

**Case 2:**

<table>
<thead>
<tr>
<th>Booking start time</th>
<th>8am</th>
</tr>
</thead>
<tbody>
<tr>
<td>Booking end time</td>
<td>6pm</td>
</tr>
<tr>
<td>Offset</td>
<td>10 hours</td>
</tr>
<tr>
<td>Description</td>
<td>The above setting is the same as below: Booking start time: 8am Booking end time: 4am (next day) You cannot book multiple day events, as each day you are only permitted to book from 8am to 4am (next day)</td>
</tr>
</tbody>
</table>

**Case 3:**

<table>
<thead>
<tr>
<th>Booking start time</th>
<th>8am</th>
</tr>
</thead>
<tbody>
<tr>
<td>Booking end time</td>
<td>6pm</td>
</tr>
<tr>
<td>Offset</td>
<td>14 hours</td>
</tr>
<tr>
<td>Description</td>
<td>The above setting is the same as below:</td>
</tr>
</tbody>
</table>
### 6.3.9 Repeat Booking

Depend on the permissions, you may see the following options for a repeat booking:

- **Daily:** this is default option

  ![Repeat Booking Form]

  - Description: Dong Zheng
  - Notes:
  - Repeat event options:
    - Daily, Weekly, Monthly
    - Every 1 day
    - Every workday
  - End by: 27/09/2011
  - Time period: 08:00 - 30 June 2018
    - 08:15 - 30 June 2018
  - Reminder:
  - DELETE, CANCEL, OK

- **Week:** you see this option only if you are permitted to book longer than 2 weeks in advance
- Month: you see this option only if you are permitted to book longer than 2 months in advance

The definitions of repeat booking per day, per week or per month is the same as Outlook.
“End By” date is set by the system according to max days/period set out in your certificate or access group. However, you can bring it forward to an earlier date.

6.4 Booking with Form

In certain situations, you might need users to submit the forms while booking the resource. The form might be used for capturing metadata of the sessions, such as referral form, consent form, sample form and safety form. After you set up the booking form in Resource Manager, the form button appears in the calendar pages so users and staff can access the original form to fill in.

To Attach Form:

Booking lightbox window shows the form buttons according to the settings in Resource Manager.
Click on **Upload XXXXX Form** to upload the form.

**Access Uploaded Forms:**

Staff can access all the uploaded forms, and users can only access their own submitted forms. The access button is positioned on top of the calendar page.

---

### 6.5 Ongoing Booking Confirmation

Users make the future or advance bookings and they can cancel the bookings one day before or anytime depends on the system settings. However, we do know that some users forget to turn up for the booked sessions due to various reasons so the booked resource time is unused and that costing the opportunity for other users who can take over the session time. Thanks to QUT, we introduce a new way to manage the situation. In short, system sends a booking confirmation reminder 3 days (for example) to the user with an embedded confirmation URL, if the user clicks the URL, system confirms the booking as valid, if the user does not click the URL within the date of reminder, the booking is cancelled by the system automatically at 12am on the following day. This feature is optional but does provide more engagement with the users to manage resource sharing efficiently.

- Enable user booking confirmation

Before you can use this feature, you need to turn it on as system disables it by default. Go to **System Settings -> Configure System** to enable the parameter.
- Set up user confirmation to all training certificate

A quick and bulk way is provided to enable or disable user confirmation to all the certificates. Go to System Settings -> Configure System, click on ‘Enable Certificate Confirmation’ to enable user confirmation to all the certificates; or click on ‘Disable Certificate Confirmation’ to disable user confirmation to all the certificates.

- Set up user confirmation to each training certificate

In addition to the above bulk functions, you can set it up to the individual certificate. The user booking confirmation is tied with each training certificate. By doing so, you can have an individual control to execute this feature to each resource or each certificate of the very resource. So users who have the very training certificate are receiving the booking confirmation reminders. Go to Resource Manager, select a resource to edit.
Explanation of two new parameters:

- **User Booking Confirmation**: to enable or disable the confirmation reminder to the certificate
- **User Booking Confirmation Days**: If the above parameter is checked or enabled, the system sends the confirmation reminder to the user who makes the bookings, an embedded URL is included in the reminder notice. By default, it is set to 3 days, which means the system sends the reminder 3 days before the booking start date.

**Confirmation Reminder**

System sends out the reminder in the following context as example. The user can cancel or confirm the booking.
Dear Abhrup Das,

This is a confirmation notice for the following booking:

Booking Resource: Eclipse Ti-E
Booking Start: 12/02/2018 00:00
Booking End: 12/02/2018 00:15

Your booking will be automatically cancelled at midnight unless you confirm the session using the link below.

TO CONFIRM BOOKING, click [http://129.94.165.9/userconfirmationscript/userconfirmation-1517102227585.php](http://129.94.165.9/userconfirmationscript/userconfirmation-1517102227585.php)

TO CANCEL BOOKING, click [http://129.94.165.9/userconfirmationscript/usercancellation-1517102227585.php](http://129.94.165.9/userconfirmationscript/usercancellation-1517102227585.php)

Kind regards,
Mark Wainwright
Analytical Centre: Bioanalytical Mass Spectrometry Facility

THIS IS SYSTEM GENERATED USER CONFIRMATION NOTICE. PLEASE DO NOT REPLY.

Click on the embedded URL to confirm the booking by itself.

Click on the embedded URL to cancel the booking by itself.
System scans the user confirmation response once a day at 12am, after scanning, systems turn off the reminder control to the responded bookings, and also cancel the bookings which the user does not respond on the same day. For the cancelled bookings, system sends the cancellation emails to the users. On the following day, the embedded URL page is deemed to expire either due to the cancellation or the completion of user confirmation activation.

6.6 Calendar Settings

ACLS provides a way to customize your calendar. There are 2 settings related to the calendar that you are able to control:

- Calendar View: default calendar view upon the first access, week view only or month view
- Calendar Popup: single mouse click or double click to open the booking event window
Operating ACLS

6.7 Resource Details

You are able to view resource information by clicking on Resource Details.
Bruker APEXII

Facility Group: XRD LAB

Description: The Bruker Kappa APEX is fitted with a molybdenum sealed X-ray source and graphite monochromator to determine the molecular and crystal structure of materials from a single crystal.

Location: Office M97 - access via Lab 015, Chemical Sciences Bldg F16

Trainers: Chris Marjo, Mohan Sathiamoorthy, Dong Zheng.

6.8 Booking Quota

You are able to view booking quota by clicking on Booking Quota. Booking quota defines all the booking permissions and quota.

Booking Quota

Max Allowed Booking Hours/Day: 24
Max Allowed Booking Hours/Period: 1344
Allowed Booking Period: 22/09/2017 to 29/09/2017
Booking Start Time on Day: 6:00
Booking End Time on Day: 24:00
Booking on Weekend: Allowed
Min Hour per Session: 1
In addition to booking quota, you can check your booking balance by clicking on Refresh to the balance chart. Moving the mouse over the chart, the balance hours shows up.

6.9 Color Codes

Different types of bookings use colors for easy differentiation. You are able to view color codes quota by clicking on Color Codes.
6.10 Change Others Bookings

This is available to staff only. The nominated staff group can change anyone’s future bookings through *User/Approve Booking*. By default, this capability is disabled.

Please keep in mind that any future bookings can only be changed by the person who made the booking, or cancelled through service booking. If you enable this booking edit capability, you risk changing the bookings of others without their permission or by mistake. So it is highly suggested that you should not enable this (unless you are so determined and ready for PR (public relation) issues if any).

*Enabling Edit Booking: (Admin Only):*

Go to *System Settings* -> *Configure System*, click on *User Booking Edit Permission*.

![User Booking Edit Permission](image)

Tick the radio button to select the staff group you want to have the capability to edit other bookings.

6.11 Pre-Approval Bookings

The implementation of pre-approval of a booking is illustrated below:
Operating ACLS

If the resource is defined such that all the bookings made by users are subject to approval by the trainers, then any bookings made by users are treated as “unapproved” booking events.

When bookings are made, all the trainers receive an email notice and any of the trainers can approve or decline the “unapproved” bookings.

**Approve Bookings:**

Only trainers can approve “unapproved” bookings through **User/Approve Booking**.

Clicking on the “unapproved” event, opens booking template form:
You need to select the “Approved” radio button and click on “Ok”, then save changes to give approval. Users will get notified automatically for the approval.

**Decline Bookings:**

Simply delete the “unapproved” booking to decline it.

**Direct Access To Unapproved Bookings on Dashboard:**

If you are the listed trainer, there is a quick way you can approve or decline unapproved bookings at *My Dashboard -> Approve Bookings* without going through the calendar.

The indicator shows that there is one outstanding unapproved booking for action. Click on the dashboard link, you can zoom in on the details.

If you need to contact users for any issues, please click on *Click to contact user*.

**Direct Links To Approve/Decline Unapproved Bookings:**

In addition to the quick access through *My Dashboard*, the email notice to trainers contains a direct link to process any unapproved bookings. Simply click on the link in the email notice to proceed.

**Booking Reports and Invoices**

None of the “unapproved” bookings are included as “valid” bookings in reports and invoices.
Mobile browser version

The mobile browser version is being replaced by the smartphone app. You are encouraged to install the iPhone app or the Android app which gives you better UI and bulletin features.

The following snapshot explains how it works.

- If you are the trainer, you are able to approve or decline an "unapproved" booking event.
- You are able to cancel any "unapproved" booking event made by yourself.

- If you are a user, the system indicates that: The event you are going to book, is subject to approval.

6.12 Set Min Booking Unit 15m vs 1h

ACLS used to set the minimum time interval for booking calendar as either 15 minutes for all resources or 1 hour for all resources. Now you are able to set a minimum booking unit for each resource individually. In other words, some can be 15 minutes, some can be 1 hour.

Go to Utilities -> Resource Manager, pick the Min Booking Unit that suits your needs.
• If set to 15 minutes

Time interval on booking calendar is set to 15 minutes as shown below.

![Booking Calendar Example](image)

• If set to 1 hour

Time interval on booking calendar is set to 1 hour as shown below.

![Booking Calendar Example](image)

6.13 About Min Hour Per Session

Min Hour Per Session prevents under-booking issues being faced by labs. The default setting of a session time is 15m or 1 hour depending on the choice set in Resource Manager. For example, if TEM 200 experiment needs min 2 hours per session, the system checks each booking session time to ensure the min 2 hours are booked, otherwise the booking is blocked and cannot be saved.

Admin/manager can go to Utilities -> Resource Manager, pick a resource and edit, then change the field “Min Hour per Session” to the min hours required. Simple and straightforward!
ACLS reviews each booking event session time to check if it is less than the min hour per session. If less, the booking is blocked and cannot be saved. An alert indicator is shown at the top right-hand corner.

6.14 Set Up Public Access Calendar

ACLS allows you to set up a Public Access Calendar without needing to login. The booking details can be hidden depending on your settings. The advantage of setting up the Public Access Calendar is to provide a quick way of accessing booking information.

Upon clicking on To View Bookings, the calendar shows the bookings for the next 7 days.

To View Bookings on Mobile Browser Version:
6.15 Check Resource Status

Click on **Dashboard -> Resource Status** to view the status of the resource. The status covers the current booking status and tracking status (if tracker is installed).

6.16 Linked Booking Resources

Through the linked resource calendar, user can book resource #1 and at the same time, system automatically book the linked resource #2. System checks availability of resource #2 before accepting the booking to avoid the double bookings.

First, you need to set up the linked booking resources via Resource Manager.
Open the Linked Booking Resources tile, you see the tiles to add new linked resources, and also the available linked resources.

System designs primary resource and second resource, if you get them linked, when user books primary one and system automatically books the second one, but not vice versa. It is one way to sync the booking between the primary and the second resource.

Go to Booking calendar, you can see the linked details if any. The dark grey colored bookings are the linked bookings. For example, you book Accutom 50-1, system automatically books the same time for Accutom 50-2 as they are linked.

Without the locking, the linked resources are disabled.
6.16.1 Make bookings to the linked bookable resources

All the following booking tools are modified to handle the booking for the linked resources. The dark grey is used to indicate the linked second resource bookings.

- Operation booking tool:
**User booking tool:**

<table>
<thead>
<tr>
<th>Time</th>
<th>Event Details</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>
6.17 Set Up Accounts

There are two ways to set up accounts: through **User Registration**, or through **Account Manager**.

The Account Manager screen requires the following information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account</td>
<td>Account numbers or names provided by users upon registration</td>
</tr>
<tr>
<td>Account Type</td>
<td>Internal or external</td>
</tr>
<tr>
<td>Charge/Hour</td>
<td>Charge rates (depending on business model, for resource charge scheme, you don’t need to set this field up)</td>
</tr>
<tr>
<td>Note</td>
<td>Remarks for accounts</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Expiry date of account</td>
</tr>
<tr>
<td>Account code</td>
<td>Used for system administration purposes</td>
</tr>
<tr>
<td>Recorded Created</td>
<td>Original date of account creation</td>
</tr>
<tr>
<td>Last Update</td>
<td>Staff who made last change and change time</td>
</tr>
</tbody>
</table>

6.18 Default User Registration Account
For the labs which do not require to capture the usage for billing, you are able to set up a default account for each registration approval, which means ACLS automatically adds the default account to the new user profile so he can start to book resources. By doing so, you don’t need to process account information for each new user.

The default account is displayed if it is selected. Click on reset to clear the default account setting.

To set up default account, click on Default Account for User Reg Approval.

6.19 Manage Account Budget

Through *Budget Manager*, you can track each account balance, received payment, operation cost and the finance report. Budget management uses the budget envelop mechanism. Each budget envelop is set up for only one account, and only one account can be assigned to any one budget envelop at a time.

Four major functions are available in *Budget Manager*: 
• Budget Envelop:
  • Create budget envelopes
  • Edit budget envelopes

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

• Parameter descriptions:

  • Budget name: by default, it is the same as the account name to make it easy to identify. However, you can change this to any name.
  • Account: account for the budget envelop.
  • Start date: it is recommended that the budget envelop start date is the first date of the first month of the financial year.
Expiry date: the system assigns the expiry date of an account as default. It is recommended to take the last date of the last month of the financial year.

Note: for any special notes.

Rollover enable: If enabled, you can do a rollover. If not, then this budget envelop is disabled and you can use this budget envelop for bookkeeping only.

Rollover schedule enable: not in use.

Rollover scheduled date of month: not in use.

Email alert enable: If enabled, the system runs an auto-check against the Alert Threshold of Budget Balance. If the balance is below the minimum, the system sends out an alert to the affected users and the staff members activated through Email Alert Configure. If not, the system will not run any checks against the minimum balance.

Days to deactivate account: If set to 0 (zero), it means that the system will not run a check against the minimum balance for account deactivation. If set to one or more days, the system will run a check against the minimum balance, and deactivate the account after the number of days set in this option when the budget balance is below the minimum. So once the account is deactivated, user access to ACLS may be stopped, depending on the number of active accounts they hold.

Received Payment & Operation Cost:

You can view the history of Received Payment & Operation Cost entry at any time.
Bookkeeping for operation cost, such as material cost, labour cost, etc. However, this does not refer to resource booking or usage charge, or sample service charge.

Note: Before budget rollover, you can cancel the payment if there are errors. Once the budget is rolled over, all the affected payments and cost entries are locked to prevent further changes.

Budget Rollover:

Budget rollover is used to finalize all the payments, cost entries, charges and balances to the budget envelop for each month. It does a monthly rollover, for example, in Feb 2010, you can do the rollover for Jan 2010.

To make work flexible, you have the option to choose the start month of the rollover, then the system automatically chooses the subsequent rollover month. For example, if you start the rollover in Jan 2010, then the system asks you to run it again in Feb, March, and so on. You are not able to skip a month, that is, you can’t run the rollover in March without having done it in Feb.
Logically, you should start the rollover from the first month of your financial year, and close the budget envelop in the last month of the financial year. For the next year, you will need to create a new budget envelop.

Once the rollover is done, you can write notes for this rollover and click confirm to proceed.

As good practice, you should view the rollover summary for each budget before running the rollover.

- Budget Details & Summary:

**6.20 Register a Project**

If ACLS has been configured to be project-based, you are required to register a project to enable users to access the system.
To register a project, the following information must be entered.

- Project short title
- Project full (long) title
- Project supervisor (contact point of project)
- Project accounts
- Cost contributions from each account in the project
- Project researchers
- Charge rate for each researcher
- Project validation

For example, researcher #1 is charged $50 per hour for using any instruments. If the project has two accounts #A and #B, and #A contributes 80% of the cost and #B contributes 20%, it means that $40 is billed to account #A and $10 to account #B.

Following registration of a project, ACLS will generate printable project information. This information can be used for future reference.

For example, type in ‘mole’ to search any projects related to molecules. To edit the project, click on **Edit** button to continue.

**Project Form:**

You can upload any related project forms: ethic form, animal form, project funding form, project OHS form, etc.

Click on **Add/Delete Form** to start.
6.21 Search Users

There are a few ways to search for a user, as follows:

- User Profile Manager
- Find User Training Records
- Find User By Supervisor
- Newly Reg User Summary

The level of access control is detailed in the table below:

<table>
<thead>
<tr>
<th>Level of Access</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Profile Manager</td>
<td>- User and Supervisor group can only edit their own profile</td>
</tr>
<tr>
<td></td>
<td>- Staff group and lab manager group can search and view user profiles, and issue training certificates</td>
</tr>
<tr>
<td></td>
<td>- Admin group can search, edit, add user profiles, edit user accounts</td>
</tr>
<tr>
<td>Find User Training Records</td>
<td>- Explore user training records</td>
</tr>
<tr>
<td></td>
<td>- Staff group and above can access this function</td>
</tr>
<tr>
<td>Find By Supervisor</td>
<td>- Supervisor group can view a user’s profile under their supervision</td>
</tr>
</tbody>
</table>
Operating ACLS

6.21.1 User Profile Manager

ACLS provides a quick search and a full search capability. The default is quick search. However, as staff, you are able to run a full search with many options by school or organization, account or project, group, training certificates and phone number.

There are two options to display the search results: Short Form and Full Form.

6.21.2 Find User Training Records

Staff and admin can search and find any user training records.

6.21.3 Newly Reg User Summary

This function displays the number of new users registered in a specific period by selecting the period.

6.22 Export User Data

Through User Profile Analyser -> Grid Charts, you are able to export user data to an Excel file using the onscreen excel tool.
First, you need to define user data fields. Simply select the data field of your choice, and submit.

6.23 Broadcast Email Notices

To broadcast an email notice to a group of users, click on **Broadcast Messages**. Select the user group or training certificate group, enter the message title and content of the message.

Click **Send Message** to complete the broadcast.

You can also generate a full list of email addresses for the selected group. This function enables you to use any local email client program to send emails with attachments.

- Check the box **Generate Email List**
- Click on **Send Message** to compile the list

The signature is similar to the signature in the email client programs, such as MS Outlook. Once set up, the system attaches it to each message as a signature.

- **My Mailing List**
You can set up your own favorite mailing list. Choose My Mailing List in Type of Group, you can show the list details and you can broadcast or get the email list for My Mailing List.

- Generate Email List

Generate Email List is provided if you wish to retrieve the mail list for the local email client, such as Outlook, etc. In particular, when you need to broadcast messages with an attachment, you’d like to get the list as the current ACLS does not support emails with attachments yet.

6.24 Contact User

Staff are able to contact each user at the user profile page. This is a handy tool to communicate with the user.

6.25 Edit Booking Data and Usage Log Data

6.25.1 Booking Data

Staff can edit, delete and add bookings for the past two months. For example, if a user falls sick on the day of bookings, staff can correct this by deleting their bookings.
6.25.2 **Usage Log Data (collected by tracker)**

Staff can update incorrect login and logout times, and add new logs. There is a built-in feature to auto-detect an incorrect time log, such as a missing logout time. Incorrect log data is highlighted in red to assist correction.

The system displays the entire log data for a selected date, and this assists you to enter the correct time and avoid any conflicts.

However, as you may be aware, tracker may not record the logout time due to the following operations:

- Without clicking on logout button on tracker, the user logs off the computer
- Without clicking on logout button on tracker, the user may reboot computer
- Due to network breakdown, the system fails to record the logout time.
- Due to server breakdown, the system fails to record the logout time.

As we know, the world is not perfect, so admin/staff have to correct error usage logs if you want to produce correct usage reports and invoices. The correction should be carried out in the first week of each month to fix the error logs of the last month.

A smart feature is implemented to highlight the error logs for correction. Follow the steps below to fix error logs.

- **Fix Error Logs**

If there are errors, you can see a short list of error logs. If not, the table will appear blank.

- No error logs:

- Have error logs:
Simply click on Click to Fix. Click to fix defaults to add a logout time for 0.1h usage time. 0.1h usage time is just a default value for the missing logout time. To estimate the correct usage time, you may take the following recommended steps:

- **Contact user who was involved in the missing logout time**
- **Check against the local tracker log file on the instrument computer**
- **Check against the booking hours made by the user**

You may also apply a best estimate of usage time based on lab policy and your experience.

It is good practice to print out the error logs in case you wish to compare the results after fixing them.

The system highlights any usage hours at 0.1h for your attention to adjust to the correct usage time. You may see a few 0 hour logs which do not mean errors. Users may login and logout quickly on instrument computers for simple tasks of less than 0.1h (or 6 minutes).

</tbody>
</table>

### Important Notes

Fixing error tool is not guaranteed to fix all kinds of errors. If the tool does not fix the error, you have the option to delete the error logs and add a new one. However, only the system administrator is given the power to delete logs as this is a non-recoverable action.

#### 6.26 Generate Data Reports

Click on **Report Manager** to see all the reporting options. Reporting options are dependent on system configuration, be booking data, be usage (log) data.

The level of access control is detailed in the table below:
### Level of Access

| User Data Report                              | User group can access their own booking data or usage data |
|                                             | Supervisor group can access their own and their supervised group’s booking data and usage data |
|                                             | Staff group can access all booking data and usage data, plus sum data by resource |
|                                             | Lab Manager group can access all booking data and usage data, plus sum data by resource, and sum data by univ, school and org |
|                                             | Admin group can access all booking data and usage data, plus sum data by resource, and sum data by univ, school and org, and generate invoice statements per supervisor |

| Sample Job Report                             | Lab Manager group can access all sample job reports |
|                                             | Admin group can access all sample job reports, and generate invoice statements |

An automated data reporting tool is available through **Batch Report (bDRT)**. **bDRT** serves as a plug-in module to ACLS. It runs monthly reports, and you have the option to run the reports overnight or instantly.

Alternatively, manual reporting for an individual user; resource; school/org are available in **Report Manager**. Additional reporting tools available:

- Sample report
- Training certificate report
- Commercial booking report
- Group booking report

#### 6.26.1 bDRT

Through **bDRT**, you are able to run monthly reports overnight or instantly.

- Step 1:

Select **Month** and **Year**, then choose if running report Overnight or Now, and click on **Accept**.
Step 2:

If the system detects that a previous report exists, it alerts you for confirmation. If this is the first report, you will see the following page:

That is all you need to do.

Click on **Access Batch Data Reports** button to access. The system sorts out the reports by year index.

Furthermore, the system provides you with sorting options to assist with your reporting needs.
6.26.2 User Report Snapshot

Booking Report - User

- Name: User Name
- Id: User ID
- Supervisor: Supervisor Name
- Account: Account Details
- Hours: Hours Worked
- Amount: Amount Earned
- Rate: Rate of Pay
- Total: Total Earned
- Changes: Changes Made

6.26.3 Resource Report Snapshot

Booking Report - Resource

- User: User Name
- Organization: Organization
- Supervisor: Supervisor Name
- Account: Account Details
- Hours: Hours Worked
- Amount: Amount Earned
- Rate: Rate of Pay
- Total: Total Earned
- Changes: Changes Made
6.26.4 **School Report Snapshot**

![Booking Report - School/Organization](image)

6.27 **Generate Invoice Statement**

Click on **Invoice Manager** to see all the invoicing options, depending on system configuration, be booking data, be usage (log) data. Each invoice statement is set up per supervisor.

In general, there are two options to run invoicing statements:

- **Manual**: you can manually generate invoice statements related to booking data or usage log data, as well as sample jobs.

- **Batch**: through **bDIS**, which is similar to using **bDRT** for reporting, you are able to complete an invoicing job with a few clicks.

Supervisors can access their own invoice statements when they logon to ACLS. Upon supervisor logon, the system does a cross-check against that supervisor to list all the invoices related to Booking Invoice Statement/Usage Invoice Statement, and Sample Service Invoice Statement (if any).
6.27.1  Supervisor Invoice Snapshot: Booking Data

Click on Individual Booking Invoicing to commence. The Supervisor Invoice for booking details each booking or usage session time and generates the total.

A printable copy can be obtained by clicking .

Invoice No: 00000001
6.27.2  Supervisor Invoice Snapshot: Sample Jobs

Click on Sample Job Invoicing to commence.

Select a supervisor and a list of all the completed jobs under this selected supervisor is displayed for further action. The "click-show" information box provides the information for each job.

Now you can select multiple jobs for the same invoice, simply tick the required checkbox(es) and click on Continue.

Here is an example of the invoice statement:
6.27.3 Batch Data Invoice Statement (bDIS)

*bDIS* operates in a similar way to *bDRT*, as illustrated below:

You have the option to run *bDIS* Now or Overnight. Upon completion of running *bDIS*, you receive an email notice. On the right-hand side of the display, there is a short help information box to guide you through.

You can access the invoices through *Access Month Invoice Statements*. 
Click on "Invoice Statements" to access the month of interest:

- **Tick to send a copy to self as record**
- **Email To Selected Supervisors**
- **Email To All**
You are able to email the invoice statements to the selected supervisors or to all on the list. You can also set it to have a copy sent to yourself.

6.28 Invoicing Summary

This feature is to make invoicing job easier for lab managers and admin staff. Admin can easily combine all invoices over a month or over a year. The invoice covers usage charges and consumable charges, and also the original invoices.

6.29 Set Up Trainers and Certificates

There are two ways to set up trainers and certificates: go to Utilities -> Training Manager, or go to User Profile Manager.

There are two kinds of certificates:
• Certificates per resource
• Certificates per resource group

There are two kinds of trainers:
• Trainers per resource
• Trainers per resource group

Select the Resource/Resource Group from the drop down list. List All gives an overview of all trainers and certificates.

Group certificates supersede the single resource certificates. The same rules apply to trainers.

6.29.1 Trainer Registration

A trainer can be removed, or be temporarily suspended. Through Training Manager, multiple staff can be set as one resource trainer at one go.

Go to User Profile Manager, edit the staff profile, go to Trainer tab, simply check or uncheck resource to add/remove trainer status to the staff. Through profile, multiple resource trainer status can be updated to the staff.

6.29.2 Set Up Primary Trainer

Primary trainer is the first in the trainer contact list at resource details of the calendar or resource catalogues.
6.29.3 Find Resource Trainers

To facilitate the finding resource trainers, a new menu and an access button is added to booking tab.
6.29.4 Certificate Registration

It is good practice to think over the certificate structure before commencing certificate registration. ACLS requires the following certificate parameters to be established.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Certificate Title</td>
<td>Add the resource name as part of each certificate title for easy recognition.</td>
</tr>
<tr>
<td>Content/Details</td>
<td>Details of certificate</td>
</tr>
<tr>
<td>Max Hours/Day</td>
<td>Max permitted booking hours per day</td>
</tr>
<tr>
<td>Max Days/Period</td>
<td>Max permitted days from now</td>
</tr>
<tr>
<td>Max Hours/Period</td>
<td>Max permitted hours within Max Days/Period</td>
</tr>
<tr>
<td>Booking Start Time</td>
<td>Allowed start time on the day</td>
</tr>
<tr>
<td>Booking End Time</td>
<td>Allowed end time on the day</td>
</tr>
<tr>
<td>Booking End Time Offset</td>
<td>Refer to offset section</td>
</tr>
</tbody>
</table>
Operating ACLS

**Booking Cancellation**
If unchecked, booking can be cancelled anytime. If checked, bookings can be cancelled 24 hours before the start of the session.

**Weekend Booking**
If checked, weekend can be booked; if unchecked, weekend cannot be booked.

**Expiring Period**
Counted in months from last user login to the system.

**Onsite Supervision**
Only works with ACLS Console.

**Certificate Invalid**
The date of certificate deactivation.

**Last Update**
Staff who made last change and change time.

Alternatively, it is much easier to set up certificates through **Certificate/Group Certificate Wizard** which is a one-stop process.

### 6.29.5 Live User Certificate List

The live search user certificate does help the trainers to find the very certificate quickly when there are a large number of resources and certificates set up in the system.

Go to **Edit User Certificate** page, a live search box is provided to quickly find the right the certificate to add to the user training profile. Simply type in any part of certificate name to add.
6.29.6 **Certificate Report**

Admin staff may be interested in getting the number of users who are issued training certificates over a period of time. Training Certificate Report provides the statistical data for that.

6.29.7 **User Certification Notes**

A note field is available to the user certification process. The trainers can have the options to record the notes for each training records.

The certification notes are served as the part of training records in relation to any signed forms.
6.30 Record User Forms

There are two ways to do so.

Through **User Profile Manager**, add form to the user.

Through **Form Repository Manager**, you are able to register the forms. This can centralize the storage of signed procedures, forms and papers electronically to cover:

- Induction
- OHS
- Access
- Subscription

With **Form Repository Manager**, users and staff can easily track and access the form records generated over years.

- Register Forms:

  You can upload forms (PDF only) against an individual user, and there are no limits for this.
Furthermore, staff can access forms on the **Dashboard**, and each user can access their own induction documents when they logon to ACLS. In addition, you can search forms by users. The system provides a means to remove unwanted forms, and restore them if needed.

6.31 Store and Share Documents

ACLS provides a solution to store and catalogue documents for secured access and sharing. Through **Document Repository Manager**, you are able to register general documents and resource documents. You can perform the following tasks:

- Add/Edit General Document Sub-Folders
- Register General Documents
- Register Resource Documents
- Search Documents
- Deleted Document Records
Click on **General Documents** to register:

- Add/Edit General Document Sub-Folders
- Register General Documents

- Step 1: select the folder where the document is located, you can upload documents singly or in multiples
  - Select the documents, click on **Open** to upload.
You are shown the uploading progress:

Upon upload, you **MUST** click on button [Save To Doc Registry] to complete document registration:

When Upload is completed, you can see the all uploaded file names as below:

Upon upload, you **MUST** click on button [Save To Doc Registry] to complete document registration:

Step 2: Save to registry

You must click on **Save To Doc Registry** to register the documents to the system. If you don’t do this, then the documents are not considered as **Registered**.
The system returns to the home page of **Document Repository Manager** and shows you the documents you just uploaded.

If you go to **Booking tab -> Documents tile**, you can see the results as illustrated:

Register Resource Document is similar to the process shown above. The only difference is that you must pick a resource first.

The difference between general documents and resource documents is illustrated below.

<table>
<thead>
<tr>
<th>Registered Users</th>
<th>Registered Staff</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General Documents</strong></td>
<td><strong>Resource Documents</strong></td>
</tr>
<tr>
<td>All can access</td>
<td>Users who have a resource training certificate, can access. Those who don’t, cannot access</td>
</tr>
<tr>
<td>All can access</td>
<td>All can access</td>
</tr>
</tbody>
</table>

To search the documents, simply type in a few letters of the document name or resource name, and you can get results such as below:
If you wish to delete any unwanted files, click on button **Delete Unwanted Documents** to continue. Then take action to delete the documents.

### 6.32 Track Samples

*Track Samples* provides the following options:

- Enclosed lab work: Customers/Users submit their samples for analysis and processing
- Commercial Work: you may deal with a submitted sample for test and analysis

Utilizing Track Samples enables you to record the process systematically, archive and retrieve the results, and generate billing reports.

Track Samples records information for multiple groups. For example, the laboratory may have a few units or groups completing sample test and analyses. The Track Samples module can deal with the same sample jobs for different groups.

- Create the groups (System Administrator only).
Each group is required to have a password to prevent other personnel from accessing unauthorized group work.

- Create the sample type.

- Create the method of analysis.

- Each method of analysis is linked to a resource and is allocated a charge per sample.
- The status shows whether the sample type or method is in use. The defined sample types or methods cannot be deleted once they have been created.
- You can create new sample types or methods at any stage. Once a sample type or method has been created, you are then able to check the samples and monitor their progress.

### 6.33 Check-in Samples

When samples are checked in, ACLS generates a unique job number to track the checked in samples. The format of the job number is: Group Name + Current Year + Sequential Order No (ICP-2018-19), as shown below.
Select **Accept** to check in the sample. Once you have registered a new job, you will need to allocate each job with a method of analysis. Click **Edit Sample Methods** to add/edit methods, or update the job details.

A job can have multiple methods but only one sample type. You can set up a discount if needed.

### 6.34 Process Sample Jobs

Without a processing update, samples or jobs cannot be checked out. ACLS will record the last update time and the staff members who complete the update.

A job must be checked in order to make changes and updates. To process the job, run one method at a time by selecting and updating.
By default, ACLS includes the full quantity when processing. However, you are able to select a smaller number of samples. When processing, ACLS updates the charge per method based on the settings in methods.

Select the Confirm button and ACLS updates the job. The status of the selected method is marked as Processing.

### 6.35 Check-out Samples

A job can only be checked out when all the related methods are processed or updated. If not, ACLS rejects the check-out request.

After processing the samples, you can check-out the job:
Select the **Check-out** button. ACLS proceeds to final check-out and no additional updates can be made to the checked out job.

### 6.36 Upload Sample Analysis Results

ACLS has the capability to upload and archive reports or documents. All the documents can be archived, stored and backed up on the central server.
ACLS has a limitation for uploading and archiving reports or documents. Only one document type per job can be uploaded. For example, Job #1 can have Doc_ICP_2009_1.doc, and Doc_ICP_2009_1.xls, and Doc_ICP_2009_1.pdf, and Doc_ICP_2009_1.zip, but not two .doc type documents.

- Select the **Document Type** using the drop-down list.
- Enter the Download Link Description.
The Download Link Description is shown as a hyperlink with more descriptions, so that the actual file name is hidden in the link.

- Select **Browse** to locate the report on your local computer.
- Select **Upload** to complete the upload. To verify the upload was successful, select the **HTTP link** in the column Download Link Description.

### 6.37 Set Up Event & Holiday Calendar

Lab calendar is a handy tool to indicate public holidays and special lab events. The public holidays can be shown on the calendar and lab events can be shown through **Dashboard**.

Go to **Booking Tab -> Lab Event & Holiday Calendar** to set up event calendar. You can set up events and holidays for the current year, last year and next year.

Users can also access the Lab Event Calendar on **My Home**. If the calendar is set up with more contents, click on ‘details …’ to see the popup screen like a feature page.
Click on More Details to see the fly-in modal information window.

Furthermore, you are able to enable or disable any resource booking calendars for a defined period of time. For example, if you need to shut down any resource due to special events or holidays, you can set this up through Lab Event Calendar.

The system displays the status of action, close all resources for booking, or just close for the selected.

In the following example, only one resource is selected to be closed for booking.
Set up public holiday:

ACLS can watermark public holidays on the calendar. This is handy to indicate to users the dates of public holidays.

You must tick the checkbox in the column of the public holiday when setting up a public holiday.

Being marked a public holiday does not prevent users booking events on the day. You must take action to close bookings for chosen resources.

Once a public holiday is set, go to booking calendar, and you can see the watermarked public holiday on the calendar, for example, Australian Day as illustrated.
6.38 Training & Support

Users are able to submit training & support requests, track down the status of those requests, and the responses made by staff. This is a support ticketing module in ACLS.

There are 5 functions to process these requests. Users can only access 3 out of 5 as follows:

- New Request
- My Requests
- Search Solutions

Staff can access all 5 functions.

**New Request:**

Two types of requests can be selected by users: Training Request and Support Request. In the current version, there is no difference in the handling of the different types of requests.
However, in future versions, we’ll improve this feature, including analysis reports to improve the quality of service by your organization.

**My Requests:**

The system shows you open requests vs total requests. For example, 2 requests are still open of 3 requests submitted in total.

Similar to the webmail design, the system provides an HTTP kind of link to each request for further actions.

Clicking on the link directs you to the next reply page:

Different colours apply to differentiate the users’ requests and staff responses. Yellow refers to users’ requests, and blue to staff responses.

**Open Requests:**

This staff-only function allows staff to respond to user requests.

**Search Requests:**

This staff-only function allows staff to search for any requests made by users.
Search Solutions:

This offers a platform for users to search the previous responses and solutions provided by staff. Over a period of time, everyone can benefit from the accumulation of solutions and knowledge.

6.39 Conduct Survey

iSurvey (plug-in module) covers 3 processes to build, publish and analyse a multiple choice survey with any content and at any time.

6.39.1 Build Survey

Click on Build Survey under the menu of Survey Creator to create or edit a survey.

- Create new survey:

  Similar to account and resource setup, there are two operations available: edit the existing, or add a new survey.
Survey parameters are described in the table below:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Survey Title</td>
<td>Title is used as the survey access link, it is good practice to keep it short and easy to understand.</td>
</tr>
<tr>
<td>Survey Body</td>
<td>Body is used as the first paragraph of the survey. Normally, the body should describe the purpose or objectives of survey, and other survey information.</td>
</tr>
<tr>
<td>Start of Survey</td>
<td>Start date of survey available to users. System automatically activates the survey on the start date.</td>
</tr>
<tr>
<td>End of Survey</td>
<td>End date of survey available to users. System automatically ends the survey on the end date.</td>
</tr>
<tr>
<td>Survey Type</td>
<td>Anonymous or compulsory. If set to compulsory, user must complete the survey upon login before accessing any other functions of ACLS.</td>
</tr>
<tr>
<td>Access Survey</td>
<td>There are two choices: either run the survey on the ACLS Login Page; or run it on Dashboard upon user login</td>
</tr>
</tbody>
</table>

- Choose targeted users:
  Only compulsory surveys can have this option. Two compulsory methods are available: upon login or on My Dashboard page. The system disables the survey to any user who has done the survey.

- Upload survey questions:
Survey questions can only be added to the system through uploading a text file. By doing so, you only need to maintain one copy of the question file. You are able to update the questions at any time until the questions are published. It is good practice not to add new questions to the survey after publishing it to the users.

- **Upload survey multiple choices:**

  Similarly, survey answer choices can only be added to the system through uploading a text file. You are able to run the survey with the same multiple choice answers for each question, or separate answers for each question.

  The contents of the multiple choice file should follow the template as given below.

  ```
  q1
  answer 11
  answer 12
  answer 13
  answer 14

  q2
  answer 21
  answer 22
  answer 23
  answer 24
  answer 25

  q3
  answer 31
  answer 32

  q4
  answer 41
  ```

  q1 refers to ‘question 1’ in the survey, q2 to ‘question 2’ etc. The system detects ‘q1’ as a keyword for the multiple choice answers of question 1, it scans and saves the multiple choice answers for question 1 in the survey form.

  Survey creator is capable of providing radio/option button selection, allowing for one selection from multiple answer choices. As well as checkbox options, where users can choose multiple answers.
Welcome to ACLS

**Survey Questions:**

1. I'm satisfied with staff support?
   - □ Strongly agree
   - □ Agree
   - □ Indifferent
   - □ Disagree
   - □ Strongly Disagree

2. I've used the AMMBF facilities for the first time within the last 12 months?
   - □ Yes
   - □ No
   - If others, please specify here

3. I'm satisfied with laboratory facilities?
   - □ Strongly agree
   - □ Agree
   - □ Indifferent
   - □ Disagree
   - □ Strongly Disagree

4. I learned about AMMBF and its microscopy services from?
   - □ The Internet
   - □ My academic supervisor
   - □ A colleague or friend
   - □ Seminar
   - □ AMMBF showcase, presentation or publication
   - □ Staff at AMMBF
   - □ Other

**Survey Comments:**

- Preview survey:

  You are able to preview the survey any time to confirm it is correct before publishing.
Congratulations, the survey is ready for publishing!

6.39.2 Publish Survey (Accessible to Admin Only)

To make the survey available to users, you must publish it. The system permits a maximum of 4 surveys to be published concurrently.

6.39.3 Analyse Survey

There are 3 options to conduct survey analysis:

- Survey Analysis (Accessible to staff and admin)
- Search/Compare Survey (Accessible to admin only)
- Compare Response Rate (Accessible to admin only)

Survey Analysis does individual survey analysis, and presents the survey results in a graphic chart, or tablet format. The default is Bar Chart.
Bar chart:
Survey Analysis:
Questions:
1. Text files provide a simple, convenient way of storing textual data. They do provide mechanisms for reading and writing numerical data stored as text (see above), but it is safer and easier to use structured records when storing anything other than plain text strings.

<table>
<thead>
<tr>
<th>Multiple Choice</th>
<th>A0</th>
<th>A1</th>
<th>A2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strongly Agree</td>
<td>10.7%</td>
<td>16.6%</td>
<td>23.3%</td>
</tr>
<tr>
<td>Agree</td>
<td>A1</td>
<td>Agree</td>
<td>A2</td>
</tr>
<tr>
<td>Disagree</td>
<td>A0</td>
<td>A1</td>
<td>A2</td>
</tr>
</tbody>
</table>

Pie chart:
Survey Analysis:
Questions:
1. Text files provide a simple, convenient way of storing textual data. They do provide mechanisms for reading and writing numerical data stored as text (see above), but it is safer and easier to use structured records when storing anything other than plain text strings.

<table>
<thead>
<tr>
<th>A0</th>
<th>A1</th>
<th>A2</th>
</tr>
</thead>
<tbody>
<tr>
<td>56.9%</td>
<td>16.7%</td>
<td>35.3%</td>
</tr>
<tr>
<td>Strongly Agree</td>
<td>A1</td>
<td>Agree</td>
</tr>
<tr>
<td>Disagree</td>
<td>A0</td>

<td>35.3%</td>
</tr>
<tr>
<td>Strongly Agree</td>
<td>A1</td>
<td>Agree</td>
</tr>
<tr>
<td>Disagree</td>
<td>A0</td>
<td>A1</td>
</tr>
</tbody>
</table>
It is useful to know what the response rate is to the survey. The system compares the response of the active registered users.

**Donut chart:**

<table>
<thead>
<tr>
<th>Total Responses:</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Survey Analysis:</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Questions:</strong></td>
<td>A0</td>

<td>16.7%</td>
</tr>
<tr>
<td>2. text2</td>
<td>16.7%</td>
</tr>
</tbody>
</table>

- **Compare Response Rate (Accessible to admin only)**
As long as the survey response rate is saved or locked, you can select it from the survey matrix and compare. It is very useful to compare the response rate across different surveys.

![Survey Response Comparison](image)

**Search/Compare Survey (Accessible to admin only)**

Sometimes, you may wish to compare the questions from different surveys. The system provides a search and compare tool for this. It can be interesting to compare the same question in separate surveys. For example, you conduct a survey this year of this year’s users, and then may conduct the same survey the next year for that year’s users.

Comparing the results, you can easily identify if there are any variations for decision making and other purposes.

![Survey Questions](image)
6.40 Analyse Publications

ACLS provides the following ways to run the analysis:

- **Search publications:**
  
  You can type in any search texts to start search and export to EXCEL.

- **Bar charts:**
  
  Through bar charts, you can easily zoom into publication statistics by journal or by school/organization.
Operating ACLS

- Pie charts:

Through pie charts, you can easily zoom into publication statistics in % by journal or by school/organization.

![Pie chart image]

6.41 Mobile Browser Version

Through the browser on the mobile, type in the URL of the ACLS you wish to access. The first page is the login page.

Upon login, the certified resource list is ready for selection.
Scroll down to the bottom of each page, a function menu is shown for selection.

**My Bookings**: showing your own bookings from now into the future.

**User Profile**: click on the name link to see your own profile.

**Desktop Version**: click on the link to switch you to the desktop version (full ACLS version).

**About ACLS**: shows ACLS version.

**Make Bookings**: click on the resource you want to make and view bookings.
6.42 Registration Pathway

The default online registration process is a single step process. Users fill in the form and submit. The staff-in-charge either approves or rejects the registration.

However, certain labs wish to run a multiple registration process due to their lab OHS requirements. Hence, the registration pathway is designed to monitor and manage the registration process. Through Pathway, users and staff can zoom in to the process to improve the registration process transparency.
Flow Chart of User Registration Process:

- **User completes the registration form and submits**

- **System generates a unique ref number for registration and sends the email notice to the user and admin**

- **Registration pathway:**
  - Pathway accessible by the user with the ref number without the need of login
  - Admin updates the pathway status upon each stage completion
  - Going through pathway, only admin can update user registration form, and users can access it for view only

- **Approve registration by admin and system sends the approval email notice to the user and a copy to admin for record. Pathway shuts off upon approval unless admin wants to reopen to re-process.**

**Enable pathway:**

By default, ACLS disables the pathway. If you wish to run the pathway to manage the registration process, you have to enable it first through “System Settings” -> “Configure System”.

**Set up pathway:**

Registration Pathway is a process of approving a user registration request. By default, the system has the first built-in step Received registration. Admin staff can amend and add the registration process steps to suit their labs.

Go to System Settings -> Registration Pathway.
You are able to define a step number for each pathway step. ACLS shows the step order in the pathway.

- To add a new step:

You can have up to 20 steps in the registration pathway.

- Pathway on Registration Page

After you set up the pathway, the pathway link is shown on the registration page so that users can check their multiple-steps registration status.
The registration ref number can be used to check the registration pathway status.

A copy of the registration notice is sent to the contact us email defined in Configure System. If you wish to add more staff to receive the new user registration request email, you can go to System Settings -> Email Receiver to set them up.

- Approve Registration

Due to the introduction of Registration Pathway, to approve the user registration, you need to go to User Profile -> Registration Pathway Manager, and select the user to continue.

On the next page, you are able to see the status of each Registration Pathway. You are able to approve user registrations until the status is closed.
Should you need to contact the user, simply go to Contact User.

Should you need to access user registration form details, go to “Click to access registration form”. For admin, you are able to update the form details; for staff, you can view form only.

6.43 iPhone App

iPhone app aims to replace the current mobile browser version and serves as a single gateway to access all ACLS nodes, and bridges the research community.

- Profile Page
6.45 Google Analytics

Google Analytics is a freemium web analytics service offered by Google that tracks and reports website traffic. Google launched the service in November 2005 after acquiring Urchin. Google Analytics is now the most widely used web analytics service on the Internet.

ACLS can insert Google Analytics script through System Settings -> Configure System -> Google Analytics. You can join our centralised Google Analytics account or your own lab account.

First, create a text file and copy Google Analytics script to the text file and save it. Then upload the text file to ACLS and click on Submit. That is it.
Here is an example of Google Analytics for UNSW ACLS SSI.

6.46 Catalogue Resources

Labs can catalogue the research equipment and other items. By default, ACLS catalogues all active resources. Users and staff are able to access resource information and to book. The total resource number is indicated on the catalogue tab.
Further breakdown of catalogues is in line with the resource groups as shown here.

Go to each resource group to explore individual resource details.

On catalogue pages, you are able to find resource description, location and trainers. Subject to the edit and booking permissions, system provides the edit access and book access.
Resource catalogue provides a table form to access all active resource information. Upon login, the resource catalogue cover page with the indication of total active resources is displayed.

6.47 Manage Consumables

Labs may provide the consumables to users for preparing and running experiments. ACLS provides the feature to manage consumable stock, track down the orders in the same concept as online shopping cart.

Register consumables:

Registering new consumables are the first part of data entry. Go to Staff -> Consumable Resources to proceed.
Consumable parameters are explained below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumable Code</td>
<td>Short code or barcode for the consumable, for example, AT2070</td>
</tr>
<tr>
<td>Description</td>
<td>A short description for consumables, for example, ATnLOF2070 100ml</td>
</tr>
<tr>
<td>Description</td>
<td>A short description for consumables, for example, ATnLOF2070 100ml</td>
</tr>
<tr>
<td>Unit</td>
<td>Unit type, for example, ml, kg, cm. It can be used as 100ml as unit.</td>
</tr>
<tr>
<td>Price per Unit</td>
<td>Price per unit</td>
</tr>
<tr>
<td>Stock Quantity</td>
<td>Good practice to set up and monitor the stocks. So lab can place the orders when the stock goes low</td>
</tr>
<tr>
<td>Re-Order Quantity</td>
<td>Re-order quantity is the min stock level you wish to maintain.</td>
</tr>
<tr>
<td>Admin Only</td>
<td>If it is enabled, the consumable can be ordered by lab admin only. It means that the consumable is Not available for users</td>
</tr>
</tbody>
</table>

Search/Edit consumables:

3 searching ranges are provided. Sorting in category is available as well.

Search/Edit Consumables

Key Words: (consumable code, description)

To see all consumables for the selected range, leave search field blank and hit [Search]

Search By: Active (2) Inactive (0) All (2)

You are able to edit the consumable profile through the search results. The consumables with low stocks will be flagged for attention.
Click on *Edit*, you are able to update consumable profile and upload the images.

You can top up the stock quantity if it goes below the re-order quantity. System also tracks the changes of the price per unit.

Recommended image size is 200px by 200px.
Price change logs are shown via flying-in modal window.

Users to order consumables:

There are 3 ways to place order for consumables.

- Through frequent access links on Booking tab
- Through Dashboard

Consumable direct access page is implemented for wet lab situation so users can record the consumable usages on the computer consoles without the need to login the system.

- Through Login page

The way to order consumables is the same as that of the online shopping shop. System provides the live search and the catalogues to put the ordered items to the cart.
Users are able to check his order records via My Order, and check the cart status via My Cart.

My Cart shows the selected consumables, and users can update the order quantity or remove the items.

3 steps are required to confirm the order after adding items to cart.
Step 3 is to select the account and submit order. Upon placing the order, system sends the notification to the user on the order details.

Users are able to continue shopping or logout to consumable login page.

**Lab admin to order consumables for users:**

Lab admin can order consumables for any users if needed. Go to Consumable Manager -> Order Consumables for User.

The way to order consumables is the same as that for users described in the above section except of Step 3. In addition, lab admin is able to see any users’ orders and user cart instead of my cart.
Lab admin can check any users’ order via User Orders.

3 steps are required to confirm the order after adding items to cart.

Step 3 is to select the user and his accounts, and submit order.
For each order, after the order is placed, an email will be sent to the user with the following information.

- Please ask one of the staffs in the cleanroom for delivery.
- Or ask any staff in the office for delivery.

**Update consumable orders:**

Lab admins are able to change the any order details. Go to **Staff -> Consumable Resources -> Change Consumable Orders.**

Click on Update to edit the order.
To cancel the order, simply change the order quantity to zero.

**Delivery status of consumable orders:**

Labs require to record the delivery status of each consumable orders. Go to **Staff -> Consumable Resources -> Change Consumable Order**, system shows the delivery status as **Open** or **Closed**.

For the closed orders, you can see the staff who records delivery and recording date.

For the open orders, you can record the delivery by ticking the checkbox of delivery status.
Cancel order:

Changes are made to keep the order quantity after the order is cancelled. System auto-rolls back the ordered quantity to the stocks if the order is cancelled.

You are able to restore the cancelled order anytime if you wish to.
On the order report, the cancellation status is displayed accordingly.

**Consumable order report:**

Lab admin can access all the consumable orders with the sorting features. Go to **Staff -> Consumable Resources -> Consumable Order Report.**

Consumable details including the stock quantity and low stock flag are provided.
Graphic presentation is available for the reports.

Consumable stock check:

System sends out a daily email to the lab admin on the consumable stock quantity.
Hi Admin,

System runs daily stock check. The current consumable stock quantities are detailed here.

- Consumable: CBL4009 4 inch chrome mask (soda lime) with holder, @stock quantity: 180
- Consumable: DISH06 Crystallising dish for 6, @stock quantity: 200

Kind regards,

ACLS Demo

THIS IS SYSTEM GENERATED RESPONSE. PLEASE DO NOT REPLY.

**Integrate the consumable orders to the monthly invoice:**

Consumable orders are consolidated to the monthly invoice for the delivered orders. Here are the samples of the invoice for reference.

**6.48 Staff Comments on Users**

Staff may want to comment on some users regarding his performance, behaviours, and others. With the sticky notes on pin board, you can go to user Profile -> Pinboard to add your sticky notes.

Only lab admin can delete the messages for the staff comments. The sticky notes commenting users can only accessible by all the staff on individual user profile, they are not shown on public pin board.
6.49 My Pin board

My pin board is like a message wall or cupboard in a lab room so users can leave sticky notes for anything. There are two types of sticky note.

- Personal: only accessible by user himself/herself.
- Public: can be viewed by any registered user and staff. The public sticky notes will be deleted from the pin board in 7 days or can be deleted by lab admin staff.

Upon login, you can see a pin board indicator on the top bar to tell you if any sticky notes are left on pin board.

Click on the green pin board icon, a fly-in modal window shows up the sticky notes on the pin board, including your own sticky notes and other people’s sticky notes which allows public view.
Go to My Pinboard to manage your sticky notes. For those unwanted, simply click on Rubbish Bin to delete.

Lab admin can delete any public sticky notes on his/her pin board.

6.50 Most Popular Resources

Core Analytics is the latest collection of ACLS. Users and staff are able to look at the most bookable resources and its trend over a year span.
6.51 Most Training Resources

Core Analytics is the latest collection of ACLS. Staff are able to access the most training resources and its trend over a year span.
6.52 Most Outage Resources

Core Analytics is the latest collection of ACLS. Staff are able to access the most outage resources and its trend over a year span.

6.53 Video Player

This feature helps to promote training courses, organization events, and so on. When a user clicks on the more video clips, he/she will be taken to the video clip page.

Provided that you already set one video clip up, system shows it on the landing page upon sign in.

Admin staff can access Video Repository Manager to register or change video clips. Admin is able to add or edit the video clips provided the video clips can be accessed on Youtube or other video platforms.
Explanation of the form:

- **Title**: video clip title which can be copied from Youtube, for example
- **Description**: video description which can be copied from Youtube, for example
- **Video type**: select the appropriate from the list, system provides the sorting feature in the future
- **Video source**: either Youtube or the other platform. The difference is that system gets the default thumbnail image of the video clip from Youtube automatically, or you can upload the thumbnail image if you get video from other video sources.
- **Embed URL**: The direct video URL won’t work here, You must get the embed URL from Youtube or other video sources. For example, on Youtube, right click on the video to see the dropdown list, then go to ‘Copy embed code’.
• Resource: you can register the clip under a resource name, system can sort the clips in the future to the resources
• Set as default: system always keep one clip as default. The default will be shown on the landing page upon login.
• Status: ticked the checkbox to enable video clip. If the clip is disabled, then it won’t be displayed in the video page.

6.54 User Profile Analyser

ACLS starts to equip with the graphic analytical tools to provide user growth charts over years, user population and geographic charts over multiple schools and orgs, and training trend charts.

- Growth charts

Growth charts demonstrate the trend of the user growth over years, and over months in the selected year. Using the charts, lab can foresee the future growth potential and provide a better strategy to meet the research demands.
- Population charts

Population and geographic charts indicate the user population distributions. Using the charts, lab can work out a better strategy to meet the research demands of the major research groups.

- Training charts

Training charts show the training records over years, and over months in the selected year. Using the charts, lab can foresee the future training demands and work out a better way to meet the training demands.
6.55 Customise Induction Process

A customizable induction process is introduced to give lab power to decide if the users are required to go through a special induction process. The process is required for medical labs, PC2 labs, Ethic labs and so on. Users who needs to go through the process must complete the online process form on booking dashboard, and staff in charge might need to verify the submitted induction process. Furthermore, if the collaboration protocol is established between labs, the user induction process results can be shared between labs, so the same user does not need to re-do the induction process at the collaborated labs, just to provide the induction process reference ID.
Operating ACLS

User submit normal online reg via ACLS

Staff approves the reg to tick the box if user needs to do induction process

Reg approval ends

User Login

User sees the multi-step induction process if he is ticked to go through the induction process. Without the completion of process, the user cannot access system normal booking landing page.

Each induction process is saved for track records. (users might need to do a new induction anytime when staff demands by ticking induction process box)

Configure Induction Process (Admin only)

Each step includes the following data:
- Step title entry
- Step body text entry
- Form upload: yes/no
- Verify by staff: yes/no
- Order of process
6.55.1 Set Up Induction Process

You are able to set up multiple induction processes subject to the lab operational requirements.

Go to **Staff -> Utility -> Induction Process Manager.**

Each induction process covers the header and body first.
After creating an induction process, more details are required to make it work.

- Set up each step of the process
Basically, you need to tick the preset box and define the step order.

- Add staff-in-charge to the process

Upon users complete the induction process, ACLS sends the email notifications to the users and the nominated staff-in-charge.
- Preview induction process

Preview is available, it is a good practice to play preview after you complete the induction process setup.

6.55.2 Enable Induction Process to Users

There are two ways to enforce users to do the induction process.

- New user

Go to online registration process in User Profile Manager, select the induction process to enable.
Registered user

Go to User Profile Manager to edit user profile, go to induction process tab to enable or disable the induction.

Select the induction process and turn on to enable the process to the user.

Simply click on turn-off button to disable the induction process to the user.
Each induction process record is shown up in user profile, staff can verify the result if needed.

### 6.55.3 How The User Does An Induction Process?

Upon login to ACLS, users and staff see the induction tile on the booking tab page.

Click on Start Now to enter the induction process, ACLS automatically generates the reference ID, the ID includes lab short name.
BMIF Induction

The Mark Walrond Analytical Centre (MWAC) is part of the Division of Research. We manage major instrumentation & custom-built laboratories, mainly in the Lewy, Wallace Muth and Chemical Sciences buildings.

Reference ID: BMIF-Ref-VwzHyD88G6vd-n2oXksb-1-1

Step 1: Induction around BMIF labs

Step 2: Upload completed induction form

Select Staff to Submit

- Dong Zheng
- Phoenix Trembley

Submit

The induction process only completes till staff finalise the process verification.
On staff ends, system shows full details of each induction process in the user profile.

6.55.4 Original Concept

I’d like to thank Dr Michael Carnell for his contributions to create the induction process feature. Here is the example of the conceptual diagram of the induction process form.
**6.56 Moxy Service (Powered By UniLab)**

Moxy is a service that is comprised of MoxyCast and MoxyViewer. It allows users to quickly, easily and securely broadcast digital media, live dashboard data and computer desktops, to any screen in the world.
We collaborate with UniLab to deliver digital and smart lab solutions to research institutes, labs and communities.

6.57 Live ACLS Charts To Presentation Screens and Touch Screens

In addition to streamline the calendar data to Moxy for onscreen update, you are able to streamline the lab data analytics to Moxy as well.
- Growth charts

Growth charts demonstrate the trend of the user growth over years, and over months in the selected year. Using the charts, lab can foresee the future growth potential and provide a better strategy to meet the research demands.

- Population charts

Population and geographic charts indicate the user population distributions. Using the charts, lab can work out a better strategy to meet the research demands of the major research groups.
- Training charts

Training charts show the training records over years, and over months in the selected year. Using the charts, lab can foresee the future training demands and work out a better way to meet the training demands.

- How to Set Up Labcast Data Dashboard to Moxy

Upon login to ACLS, go to My Labcast to get started.
Simply tick the checkboxes to choose.

The result of example shows here.
- How to Set Up Moxy

Go to Dashboard container to set up dashboard.

Only 3 fields are needed to set up onscreen ACLS dashboard data analytics.

You can preview the live dashboard on your desktop. Please contact ACLS support and UniLab support if you wish to know more.
6.58 Live ACLS Calendars to Presentation Screens and Touch Screens

Through Moxy and Labcast, **LIVE** booking calendars can cast to one or multiple display screens and kiosk touch screens. You can set up the screen at the entrance of the lab, PC2/PC3 labs, or clean rooms so users and staff can view the current bookings before entering the lab areas. It works like airport arrival and departure display board. Currently, Labcast provides two calendar theme, standard (white background) and dark (dark background) as shown below.

- **Standard Calendar theme**

![Standard Calendar Theme](image1)

- **Dark Calendar Theme**

![Dark Calendar Theme](image2)

Dark theme suits for darker lab area environment, such as microscopy rooms.

Labcast feature is only available to lab staff. To set up Labcast, you need to configure the Labcast in ACLS and also sign up to MMoxy service.
- Set up Labcast in ACLS

Upon sign in to ACLS, the landing page shows Labcast feature tile.

Labcast is a unique feature to all staff members. It provides a live calendar cast of the interested resources to a display screen, be a desktop, a laptop, a tablet, or a standalone screen via a cloud service.

Click on My Labcast to set up resource casting calendars. You can go with a single resource calendar or group any resources as you wish. Recommend that each cast limits to no more than 15 resources. Labcast service can show any number casts as you wish, so you don’t have to cast more than 15 resource calendars onto a single page.

That is all you need to do in ACLS!

- Set up Labcast in Moxy

Moxy service powered by UniLab is implemented and available to operation at https://moxy.unilab.com.au/.
Upon sign up and sign in, you can access Showcase to see Moxy full capacity demo.

To publish your media containers to screens (indoor or outdoor), you need to have a cast unit, a name card size box, each device comes with unique ID. The device is powered by a USB connection to the pc or the monitor, or small power adaptor. Connecting HDMI cable to the monitor, and turn the cast unit on, it goes to the selected casts straight. This is the elegant plug and play solution provided by UniLab.

First, contacting UniLab at support@unilab.com.au to request for a cast unit which will be posted to you. Each ACLS installation is entitled a free cast unit for 12 month free trial.

- Show Case #1: MoxyViewer, web-based remote desktop access and share, a unique tool to manage desktop fleets
- Show Case #2: MoxyTouch, a touch screen service for smart lab operations.

Connect to any screens anywhere in the world

MoxyViewe
Connect to any desktops anywhere in the world

Biomedical Imaging Facility, Mark Wainwright Analytical Centre
Frequently Asked Questions

7 Frequently Asked Questions

7.1 Login and Logout

1. I tried to login but was not successful, what should I do?

Your login was unsuccessful for one of the following reasons:

- Incorrect login name
- Incorrect password

You can submit a reactivation request by clicking on Access Denied on Login Page.

Complete the reactivation form and select Submit to send the request.

2. How can I exit the system?

Simply close the Internet browser windows, or click on the Logout button as shown below.

7.2 Online Registration

3. I submitted an online registration application but it got lost. What should I do?

Always print a hardcopy of your online registration for future reference. Contact the staff member.

4. What happens when I have completed my online registration?

Once your online registration application has been submitted, print a hardcopy for your reference. You will receive a system registration notice to your email account. The nominated staff members receive the online registration and will contact you to make an appointment to discuss your needs and training requirements.

5. Which email address is used to notify staff about an online registration submission?

ACLS uses the Contact Us address. The Contact Us email is located in the footer of the page. However, ACLS also allows the online registration request to be received by multiple receivers. The multiple receivers can be set up through System Settings -> Email Receivers.
6. How do we set up a resource of interest in the online registration process?

You set up a resource list for online registration through Resource Manager. This information helps the staff receiving the registration requests in their decision making.

As long as the system detects you have set up a resource list for online registration, it automatically adds a resource page to the registration process.

7. Is it possible to include an Ethics Number Entry in online registration?

An Ethics Number is required for certain medical and medicine labs. Should you wish to set this up, please contact us for further assistance.

8. How can we set up an account entry field in online registration?

Four fields are available at Configure System, so you can set up a maximum of 4 account fields.

For example, if you set “RegAccountField1” as “Ledger Codes”, and leave the other 3 blank, then the user only sees the one field of “Ledger Codes” in the account information entry form at registration.

9. How can we set up user photo upload in online registration?

The control parameter is at Configure System, tick the checkbox of User Photo For Reg to enable the user photo upload in online registration.

10. Are there any photo sized restrictions?

No, users can upload any sizes of the photos and system re-sizes automatically.

11. How can we register to ACLS nodes on ACLS SSI?

As SSI centralises the access to multiple ACLS nodes, for new users, click Here to go to ACLS node list for reg.
7.3 Booking

12. One of users cannot make bookings, I checked his profile, seems everything is correct, why?

Most likely, the user has not been given an account. System won’t grant the users to book unless the billing account (might be a dummy account) is linked to the user profile.

13. I have tried to cancel my bookings but was unsuccessful. What should I do?

You do not have permission to cancel bookings one day in advance. Contact staff members for assistance in cancelling such bookings.

14. How can I move to different days quickly other than clicking on prev/next button?

Add-on calendar is implemented to calendar page as shown below.
15. I am unable to make bookings as I wish. What are my booking limitations?

You are able to see your own booking quota through the booking calendar page.
16. Can I book a resource for a service and make it known to users?

*Service Booking* tool is only available to staff members. After a service booking is made, ACLS automatically generates a notice to the relevant users informing them that their bookings are cancelled due to service of the resource.

17. I need to cancel a booking and make it available, as the user who booked the session cannot attend. What should I do?

*First step:* cancel the user booking through service booking;

*Second step:* cancel the just-made service booking so the time becomes available for booking again.

18. Why can’t I find a resource in the drop-down list to make bookings?

You need a training certificate to be able to make bookings with a resource. By go to *Dashboard* -> *My Training Records*, you can check your records and also find the trainers for the particular resource.

If you do have a training certificate, then click on *My Bookable Resources* on *Booking Tab* to clear the system cache and reset the booking resource list.

19. Why can users make bookings for a resource even without training certificates?

Verify the settings in *Resource Manager* and ensure that *Training Certificate* is set to *Required*.

20. How does the booking reminder work?

*Simply tick the Reminder box, and ACLS automatically sends out an email reminder to users two (2) days prior to the booked sessions.*

21. I want to change the reminder to be sent one day prior to the booked session. Can the reminder days be changed?

*Yes, go to System Setting -> Configure System, change the parameter AdvBookingReminderDay value from 2 to 1, or any number you wish.*
22. **How does the booking confirmation notice work?**

   Simply tick the Booking Confirmation box, and ACLS automatically sends out an email notice to users immediately after bookings are made. If you don’t see the box, then the system sends you the confirmation by default.

23. **Why do I receive a booking confirmation without my consent?**

   By default, the system generates a compulsory booking confirmation. So you receive confirmation emails by default. Please contact staff members if you wish to disable this.

24. **Why can’t I cancel training bookings made for me?**

   Only the staff member making the training bookings has the authority to cancel the booked sessions.

25. **If a user make bookings in error, is there a way to correct this for past bookings?**

   Go to Data Logbook Manager to edit or delete existing bookings, and to add new bookings for the user (available to staff members only).

26. **How can I print the booking calendar in a printable format?**

   Depending on which view you choose, list, day, week or month view, click on PDF Icon button to generate a PDF format of the calendar.

27. **If we have many resources for booking, can we display them in the order of resource groups?**

   Yes, you can. First, make sure that you set up resource groups through Resource Manager, then you just need to uncheck the box for the parameter Booking Display All in Configure System.

28. **How can we restrict general staff from accessing all the booking functions before they are trained?**

   What you need to do is to turn on Restrict Bookings To General Staff through Configure System.

   This only applies to the General Staff group. Any staff belonging to a Manager or Admin group won’t be subject to this rule.

   Generally speaking, if your lab is relatively large and comprised of multiple units, then it is recommended that you should turn this ON, so that only the staff in each unit can book their local resources. In this case, staff in other units are treated as normal users and will have to undertake a kind of user induction and training program before they are allowed to book resources outside their own unit.

29. **Some users are given a calendar that only shows 10 days in advance. Other users get 7 months, for example. How do I control this?**

   All booking controls are defined in the training certificates. There are two ways to check certificate settings, via User Profile Manager, or via Training Manager.
30. The day and week view of the calendar for one instrument starts at 10:00. The calendars for two other instruments start at 00:00. How do I control this?

The control is in training certificates, and nothing to do with the resources.

For example, if you set James as beginner on equipment #1, and if that certificate setting is from 9am to 5pm, then James can only book equipment #1 from 9am to 5pm.

31. Being a staff member, can I book for other users?

Yes, you can do this through User Booking tool.

32. Can I disable some booking functions as they are not relevant to us?

Yes, you can. Go to System Settings -> Configure System, then click on Enable Various Booking Calendars.
Check the functions you wish to make available to staff and users.

33. **What is the week repeat booking?**

   The week repeat allows you to repeat the booking on the same day of each week. For example, if you book 2pm to 3pm on Monday, then the system books the same time on all the following Mondays for you.

34. **What is the month repeat booking?**

   The month repeat allows you to repeat the booking on the same date each month. For example, if you book 2pm to 3pm on 22/8 and 23/8, then the system books the same time on the 22 and 23 each month.

35. **Is there a time limit for the repeat bookings?**

   Yes. This depends on your booking permission: if you can book up to 60 days/period, then the system repeats the bookings over the next 60 days.

36. **What is iCal?**

   iCalendar (iCal) is a computer file format that allows Internet users to send meeting requests and tasks to other Internet users, via email, or sharing files with an extension of .ics.

   iCalendar is used and supported by a large number of products, including Google Calendar, Apple iCal, GoDaddy Online Group Calendar, IBM Lotus Notes, Yahoo! Calendar, Evolution (software), Lightning extension for Mozilla Thunderbird and SeaMonkey, and partially by Microsoft Outlook.

37. **How do I turn off the compulsory booking confirmation for a resource?**

   By default, the system switches on booking confirmation to all resources, so that users and staff receive a booking confirmation with the attached iCal files.

   However, you can switch off the compulsory booking confirmation. Go to Resource Manager and simply uncheck the box Compulsory Booking Confirmation.

38. **I can open and save the iCal files to Outlook, but how can I share this with a web calendar such as Gmail?**

   You have to import the iCal file to the web calendar.

39. **Can I set week view as my default calendar view instead of month view?**

   Yes, go to Calendar Settings to make the change.
40. The system sets the time interval to 15m, why can't I book from 4:30pm to 5pm today if the current time is just past 4pm, for example, 4:10pm?

The calendar sets the blocks in one hour units. In this case, the current time is 4:10pm, so the calendar is blocked until 5pm. However, you can allow current hour booking permission by changing the parameter Enable Current Hour Booking Change through System Settings -> Configure System.

41. Can I set different booking time intervals for different resources, for example, instrument A for one hour, instrument B for 15 minutes?

Yes, through Resource Manager, you can set a minimum booking unit for each resource.

42. What is the difference between Booking Calendar and Data Logbook Manager?

Booking Calendar is used to make bookings in the future, while Data Logbook Manager handles bookings in the past.

43. For User Booking tool, it seems that the maximum hours booked for a user can exceed their group time allocation?

There is no control over user booking limit. Therefore, staff can increase user bookings if there is a need. You can switch this off if you don't want it open to staff.

44. How can I make a service booking in a past time?

You need to go to Data Logbook Manager, choose service booking from the drop down list under User. However, you cannot use this service booking to overwrite other bookings that were implemented in Booking Calendar.
45. Can I change an “approved” booking to “unapproved”?

No.

46. What does system tell me if I see the following booking error message?

The message means that users certificate only allows them to book no more than 2 days in advance. For example,

47. How can I approve bookings?

There are 3 ways to get an unapproved booking.

- Direct approval link in the email
- Approve the bookings on Calendar page
- Approve the bookings on Dashboard

48. What if I decline the wrong bookings but wish to restore?

The only way to resolve this is to make a new booking for the same user.
49. Is there any way of changing the settings so that future bookings can be made more than 3 months in advance?

Yes, you need to change the settings of training certificates to extend the max days/period to more than 90 days.

50. Can I book multiple resources on the same calendar page?

Yes. Resource timeline calendar offers the solution.

51. We run a few hundreds of resources. When I book a lab event, I close all resources for bookings for the lab event time. However, if I want to open a few resources for bookings, how can I do so?

Only system administrator can do so. Go to **System Settings -> Configure System -> Booking Correction** to cancel the lab event bookings.

### 7.4 Group Booking

52. Is an email notice automatically sent to the users who are booked for?

Yes.
53. **Can Group Bookings be cancelled?**

Yes, however, you can only cancel a group booking made by yourself. If you want to cancel a group booking made by other staff, please do so through Service Booking.

54. **Are Group Bookings included in reports?**

No. A separate group booking report function is added. Hence, group bookings won’t be part of reports or invoices. In the current design, group bookings are treated as special bookings. You have to manually integrate group booking data into a report if needed.

### 7.5 Update User Information

55. **How can I change my login name and password?**

You cannot change your login name once your registration is complete. However, you are able to update your contacts and to change password at My Profile.

If you are the administrator of the system, then you are able to reset any user’s password at User Profile Manager. The new password is sent to the user by the system after each change.

56. **I cannot find a particular user using the search function. Why?**

Users are separated into two categories: active and inactive.

When searching, you have to select the search range. The default is the range of active users.
57. Why is user access disabled on the day following reactivation?

This happens if User Photo Availability Check is turned on. The system applies a daily check against active user photo availability. If the photo ‘non-existing period’ is longer than the days set out in Configure System, the parameter Deactivate If No Picture Period settings, then that user’s access to the system is deactivated automatically. However, this does not apply to System Administrators.

58. Is it possible to restrict certain user access?

Yes, uncheck the box activate user entry through User Profile Manager.

59. What would be implications for double profiles to the same user?

Sometimes, the same user registers twice over a long period of time, and admin does not check against record properly. System does auto-check against email address to prevent double profiles, however, the user may use the different email address to skip the auto-check. When staff select the user from dropdown list for different jobs, system may pick one out of two profiles, for example, when you set up a certificate to a user, staff may select the wrong profile. As the result, the user cannot book the resource.

60. What should I do if a user has attempted to register an account when she already has one?

This user profile is expired In system, simply reactivate her, then delete her reg.

7.6 Update User Supervisors

61. How can I set up supervisors for a user?

Go to User Profile Manager, find the user and then go to Supervisor tab to Edit User Supervisor.
Frequently Asked Questions

Click on the button and you can add multiple supervisors, but you can only set one of them as the ‘default for invoicing’ supervisor.

62. What do you mean ‘default for invoicing’?
   You are able to compile invoice statements through ACLS. Each invoice statement is raised against a supervisor who is the ‘default for invoicing’ supervisor.

63. How can I delete a supervisor set as ‘default for invoicing’?
   You cannot delete or suspend a supervisor set as the ‘default for invoicing’. You need to set another supervisor as the default, or add a new supervisor as default. Each user must have at least one default supervisor.

64. Can I set more than one supervisor as ‘default for invoicing’?
   No. In most cases, you can only bill one. If you need to have multiple supervisors for invoicing, please contact us to discuss further.

65. I have a situation where I need to bill multiple supervisors for one user’s sample job, how can I do this as the system only permits one default supervisor for billing or invoicing?
   Unfortunately, you can only nominate one supervisor for billing. You will need to change the default supervisor through user profile manager before raising the invoice each time.

66. Can I set supervisor as inactive since the supervisor leaves the organisation?
   Yes. You can set to active or inactive by ticking the checkbox of Status.
7.7 Data Report and Invoice

67. How can I generate a billing invoice?

There are two ways to generate invoice statements, through Batch Invoicing, or click on Booking Invoicing to produce a printable invoice for each charge to a supervisor according to the booking data or usage log data.

Click on Sample Invoicing to produce a printable invoice for each charge to a supervisor according to the completed sample jobs.

68. What if I make a mistake when creating a sample job invoice?

Go to Find Invoices and then click on Cancel Sample Jobs Invoice to be able to edit a job.

69. What happens after sample jobs are taken for invoicing?

Those jobs are considered to be invoiced and closed. They are not available for further editing.

70. Can we disable invoice statement access to supervisors?

Yes, you can. You just need to uncheck the box for the parameter Invoice Accessible By Supervisor in Configure System.

71. We deploy ACLS tracker to track the true usage of research equipment. Can we see the booked hours and tracker hours on the report?

Yes. Go to Report Manager -> Resource Booking Report -> Booking Report By Resources to see both hours.
7.8 Batch Data Report

72. What are the benefits of using bDRT?

*bDRT* runs all booking reports and usage reports at the one time. Without *bDRT*, you would need to run reports one by one for each resource, or each school or organization. *bDRT* improves reporting productivity by at least a factor of 10.

Furthermore, *bDRT* runs report-like transactions. In other words, through *bDRT*, you store the entire report as one transaction record. Any changes to your pricing policy won’t have any effect on the prepared report unless you run the *bDRT* again with the new pricing settings.

73. What are the differences between bDRT and Booking/Usage Data Report function?

As explained above, *bDRT* runs all booking reports and usage reports at the one time, and *bDRT* runs report-like transactions.

Booking/Usage Data Report is a manual process that doesn’t store results but shows a report at the time you run it.

Over years, *bDRT* will provide you with an entire history of all resource running reports.

74. Why are there two kinds of data reports: Booking Reports and Usage Reports?

Regardless of your system configuration, Booking Report uses the booking data for reporting and billing, Usage Report uses the console logs for reporting and billing. *bDRT* produces two kinds of reports so that you can compare them against each other: booking vs usage.

75. How can we access the generated reports?

Go to *Report Manager -> Resource Batch Report*, click on the *Access Batch Data Reports* button to access. The system sorts the reports by year index.

Furthermore, the system provides different options for sorting to assist you with your reporting needs.

76. What do we need to prepare before running bDRT?

*It is good practice to check booking and usage data integrity before running *bDRT* each month, to make sure the booking data and usage logs are correct. In particular, you should go to Data Logbook Manager to check the usage logs and correct those picked up by the system. The wrong logs are highlighted in red.*
If there are any errors, you can re-run the reports anytime.

77. What happens when the system is running bDRT in the background?

During the short period of time that bDRT is running, the system shuts down the reporting and invoicing modules so no others can run the reports and invoices at the same time.

When the process is complete, the system resumes reporting and invoicing modules.

78. How can I access the EXCEL files generated previously?

Click on Excel Tab to access, then click each link to expand for details.

79. Can the invoice statements be PDF instead of HTM?

Not yet. A PDF converter will be introduced to ACLS in the future.

80. How can I search for the invoice statements I want?

A new search tool is provided through Invoice Manager -> Find Invoices. Simply enter part of a supervisor’s name or invoice number, and the system shows the search results for you.
81. What if I change the data and need to redo the invoices?

You just need to re-run bDIS. The system only keeps one valid invoice statement for each supervisor per month.

82. What if I want to change the format of an invoice statement?

Please contact us to discuss this further.

7.9 Manage Account Budget

83. How does Budget Manager deal with tax?

ACLS is not a certified finance system, so no tax is dealt with. If necessary, you will need to enter payments and costs after tax. For example, if you receive $200 + tax, what you need to do is to register this payment as $200.

84. What if I correct errors in the booking or usage data after doing a rollover?

Once you have done a rollover, the system has no way to roll back. To fix this, you need to create either a payment or a cost to offset the error in the balance.

85. What happens to the budget envelop after rollover?

Once you have finished a rollover, you can only make minor changes to the budget, such as expiry date, rollover enable, email alert enable and days to deactivate account.

86. What is the implication of payment or cost entry date?

The system runs a rollover each month, so the payment or cost entry date is used to decide whether the payment or cost entry will be taken for rollover. For example, if you set the entry date to Feb 2010, then this payment only takes effect for the Feb rollover.

87. Can all budget rollovers be done at the one time?

The current version only offers manual rollovers.

88. Do we have to use the budget manager? Why budget manager?

Budget Manager is designed to assist you in managing account cash flow and balance. You don’t have to use this option.

The benefits of budget manager are obvious even if you don’t want to do a rollover each month.

- Case #1:
You can use budget manager to do bookkeeping only, recording all the payments and costs.

- Case #2:
Frequently Asked Questions

If you want to know what total charges over a year or a period of time relate to a chosen account, or to a particular user group; even if you don’t want to trigger the user to make an advance payment to top up the account balance.

89. Can an expired budget envelop be reactivated?

Yes, you can reactivate budget envelopes that have expired within the last 3 months.

7.10 User Training & Certification

90. How do I register user training certificates?

All listed trainers (staff members ONLY) can issue certificates of training to users. Click on User Profile Manager and open the user profile page. Go to Certificate tab, Edit User Certificates.

A trainer can only issue a certificate for the resource for which he/she is certified as a trainer.

91. Why can’t I find the trainer from the drop-down list in Training Manager?

Only staff members (minimum level of general staff group) can be granted trainer access.

92. Who has authority to set up trainers and certificates?

The System Administrator, administrative staff and lab managers can edit and add trainers and certificates.

93. How do I know I am a trainer for certain resources?

There are two places you can check for this:

- Dashboard -> My Training Records
- Go to your profile through User Profile Manager, the system shows you for what resources you are listed as trainer.

94. How do I see who has been issued with training certificates in a particular period?

Go to Report Manager -> Training Certificate Report, you can compile a summary over a month or a period of time.
95. In Training Manager, the drop-down list only shows about 6 instruments and we have quite a few more than this. What have we done wrong?

*Please check the operation status. Only *Active* instruments can be set up for trainers and certificates. Go to **Resource Manager -> Booking Resource Chart**.*

96. I want to give a resource training certificate to a user, however it does not appear on his list of certificates when clicking on Edit User Certificate, what do I need to do about this?

*The reason for this is you are not listed as a trainer for the resource. Go to **Utilities -> Training Manager** to set up a trainer.*

97. The staff is set as the equipment trainer. When he goes to user profile, why can he not see the certificate in Edit User Certificate as show below?

*The possible cause is that either you haven’t set up the training certificate, or the certificate is disabled.*

98. I’m trying to find out how to get a list of certificate holders for a particular piece of equipment so I know who has booking rights and who doesn’t. Where can I find this?

*There are two ways to get this information.*
Go to user profile manager, click on full search button to open the full search panel, then select the certificate of that instrument to find all holders

Or,

Go to utilities -> training manager, select the resource and click on ‘certificate registration’ to see the certificate details, click on the marker to see the holder details.

7.11 Register Forms and Documents

99. What is Form Repository Manager?

This provides a form repository registry to the labs. It can centralize the storage of the signed induction/ safety/ OHS/ access/ subscription procedures, forms and papers electronically. We recognize the need to record and archive those documents over years, so with Form Repository Manager, users and staff can easily track and access the form records.

100. How does Form Repository work?

The operation is easy to understand and straightforward. You can upload any number of documents (PDF only) to an individual user.

Furthermore, staff can access the recorded forms on Dashboard, and each user can access their own forms and documents when they logon to ACLS.
101. What if I want to restore removed forms?

Click on Deleted Form Records to restore. However, you can only restore the forms that have been removed within the last year.
102. How can I set up multiple sub-folders for general documents?

You can add, edit or delete sub-folders up to 3 levels after the root directory. Click on ‘Add/Edit General Document Sub-Folder’ button to commence. The system clearly shows the already-created folder hierarchy.

The system supports 3 operations: add new folder, edit the existing folder, and delete the unwanted folder if there are no files in the folder.

103. What documents should I upload as general documents?

Examples of documents for general access are lab operation policy, safety work requirements, induction procedures, etc.

104. What should I upload as resource documents?

Resource documents are grouped per resource. Examples of documents are instrument operation guide, tutorial materials, etc.

105. Should I upload resource maintenance contracts, or service agreements as resource documents?

No, you should not. Resource Contract Depository will be provided in the future.
106. What is the maximum file size for upload?

*The maximum size is 20MB per file.*

107. How can I view the history of deleted files?

*You can view the records by clicking on Deleted Document Records.*

![Document Repository Manager](image)

*Even if you can see the history, you won’t be able to recover the deleted documents.*

108. What is the difference between documents and forms?

*There are two categories of documents: general and resource. But the forms are linked to users.*

7.12 Track Training & Support Requests

109. What if the request is closed by staff?

*The system does not allow any further responses to closed requests. If you wish to re-open any request tickets, please contact the system administrator.*

110. What happens after the system receives a request submitted by a user?

*The system sends an email notice to the ‘Contact Us Email’ defined in the system settings. If you wish to have more staff receiving the notices, please go to Email Receiver to set this up. When staff respond to the request, the system also sends a short notice to the user who submitted the request.*

7.13 Track Samples

111. What if I have added the wrong method to the sample job?

*You are able to delete the method from the job as long as the method is not checked-in.*

112. How do I collect all the job data for reporting?

*ACLS provides a tool to facilitate the handling of work. Select the month, year and the sort option.*
113. What is the size limit for file uploading?

It is 20MB. For larger files, the use of FTP is recommended. Contact the ACLS System Administrator.

114. What kind of files can I upload?

ACLS supports the following file formats when uploading:

- Xls/xlsx
- doc/docx
- pdf
- zip

115. How do I edit jobs with the same job number?

ACLS comes with an Auto-Correct Job No tool. By running this tool, all the incorrect jobs are restored with their correct job number.

116. How do I edit a finished job?

If the job is invoiced, you must cancel the invoice first to release the job. If the invoice for the job is not completed, you can Reopen Job To Edit. However, this is only available to the ACLS System Administrator.
117. How can a customer or user download results through the system?

Click Access Sample Reports on Dashboard to go to the download page. ACLS verifies the user details and displays the records and the download links according to the year index.

### 7.14 ACLS Tracker

118. What if there is no communication between the tracker and the ACLS server?

A loss of communication between the tracker and the ACLS server could be caused by a number of reasons:

- Loss of network
- ACLS server down
- ACLS server rejecting tracker request due to the incorrect server IP configuration
- Network Firewall
- Wrong server IP setting in tracker configuration file

The tracker has a built-in feature that detects connection with the ACLS server at all times.

119. Why does the tracker open the ‘Staff Authentication Page’ on user login?

If you set the training certificate of the resource to require onsite assistance, the server asks the staff on login to ensure the user is under supervision. This applies to those users under training certificates, as they won’t be able or allowed to perform the experiment alone.

120. Are there any local log files for the console so that we are able to track the operation in case of network loss?

Yes, you can go to `c:\program files\acls lab system\acls tracker\logs` to retrieve the logs. A log is created each day and updated every 5 minutes. For example, a user logs in and fails to logout properly due to network loss, then the log file provides the user login/logout information as backup.

121. Why does the tracker show ‘Invalid certificates’ when the user does have the certificate of the instrument?

This is caused by the reserved characters used in user’s password. The following characters are reserved for the tracker:

/  
|
7.15 LDAP

122. Where can I find LDAP implementation information?

*Please refer to Appendix I for detailed information regarding LDAP implementation.*

123. What if LDAP stops working?

*The System Administrator should maintain a local access login so that they can logon to ACLS when LDAP is not working, for example, if the LDAP server is down, or the network is not working, etc. Then, when LDAP is not working, they can logon to ACLS and run an LDAP connection test to confirm.*

124. What if I run the pre-configured LDAP to turn LDAP on to everyone?

*The system turns on LDAP to all users and staff except for admin staff and the System Administrator. If you wish to turn this on to admin staff and the administrator, then you have to edit individual profiles to do so. However, we strongly recommended that you DO NOT turn LDAP on to the System Administrator. Then the System Administrator can respond to the system in case of LDAP failure.*

7.16 Conduct Surveys

125. What is the difference between running a survey at Login Page and at Dashboard Page?

- If you choose to run a survey at Login Page, firstly, the same users could submit multiple times to the survey. Secondly, the system generates an external link access to the survey, and you can broadcast this link to all users to participate in the survey.

- If you choose to run at Dashboard Page, firstly, it means that users can respond to the survey only upon login to the system. Each user can only respond to the survey once, as the system automatically switches off the survey to each user when they have responded. Secondly, there is no external link access to the survey.

126. How can I set up a survey to targeted users?

*You need to set two parameters as following:*

- Set **Access Survey** to Login Page
- Set **Access Survey** upon login

*Then you simply broadcast the access link shown at the publishing survey page to the targeted users.*
127. After creating a survey, is it automatically available to users to respond?

No, you need to publish the survey. However, without setting up questions and multiple answer choices, you are not able to publish.

128. What is the question format for the question text file?

When you set up a text file for questions, every question needs to stay on the same line. A separate paragraph of a question is treated as a separate question. When you upload and scan to the survey form, the system shows you how the question will look. If the questions are not scanned in properly, you can edit the text file and re-load and re-scan.

129. What is the external access link to a survey?

You can email the link to all the users to notify them to respond the survey. Users can just click on the link to continue.

130. What does it look like when the survey is published to the Login Page?

Depending on the number of surveys, the snapshot below shows one survey at Login Page.

![Survey Snapshot](image)

131. What is the total locked active users?

You can review a survey before it has finished but first you must save the response rate to lock the current status of the survey because the user numbers are growing all the time. Without locking, you cannot compare the response rate with that of other surveys. Reset to unlock.

7.17 General

132. What could be the cause if I cannot see the web page properly?

Most likely, this is caused by the history, temp files and cache stored in the browser. You can take the following actions to reload the page:

- Press ‘ctrl’ key plus the refresh button of the browser to force reloading of the page
- Delete all history and temp files

133. How do I send short notices to all supervisors?

Go to Broadcast Messages, select all supervisors from the drop-down list. After typing in the subject and message content, click on Send Message to complete.
134. Can I set up a resource group without assigning any resources?

Yes, you can. ACLS checks the availability of resources in each resource group when listing the available resource groups for action.

135. Can I clone a resource or tool?

Yes, go to Resource Manager to clone.

136. Can I delete a resource group?

No. You need to un-link the resource from the resource group, in other words, set it as non-bookable.

137. What if I cannot find the staff to nominate the ownership of a resource group to?

Staff who are granted equipment supervisor category or above can be nominated as owners.

138. What is the difference between resource group owners and trainers?

Owners can set up trainers. To issue training certificates to users, the staff must be listed as the trainer. Owners cannot issue training certificates to users unless they are listed as a trainer.

139. Can the owner set himself as the trainer?

Yes.

140. What if my resource log time is incorrect?

Please contact the relevant ACLS support staff member for further action. Please refer to Chapter 6.21 Edit Booking Data and Usage Log Data.

141. What happens if I set the resource to ‘inactive’ through ‘Resource Manager’?

Only active resources can have training requirements regardless of whether they are booking enabled or disabled. Furthermore, in the coming Incident Reporting, users can report incidents to active resources.

142. What is the explanation for Bookable and Operation Status listed in resource configuration?

Bookable and Operation Status are independent of each other.

Here is an explanation:

- If bookable, then it is open for booking and shows up when making bookings and viewing bookings; if not bookable, then it does not appear on the booking charts.
- If ‘status’ is set to active, it is available for setting up training certificates and trainer, and is also listed in the sample tracking module. If ‘status’ is set to inactive, bookable is turned off at the same time.
143. **How can I set up 3 parameters for each user group in Group Manager, Max hours/day, Max Days/period and Max hours/period?**

An explanation and examples are as follows:

- **Max hours/day:** 3, means users that belong to this group through their training certificate, can only book a maximum of 3 hours per day.
- **Max Days/period:** 7, means this user can only book from now up to 7 days ahead. No bookings can be made beyond 7 days from now.
- **Max hours/period:** 6, means this user can only book 6 hours in total from now up to 7 days ahead. This applies from the current day up to the end of the next 7 days. So if a user booked 3 hours yesterday and left 3 hours for an additional booking, then these 3 hours are considered as a past booking from today, and he can book a maximum 6 hours again.

Furthermore, the relationship of the 3 parameters is explained below:

- **Max hours/day:** independent
- **Max days/period:** independent
- **Max hours/period:** you need to consider the two parameters above logically, in the above example, Max hours/period shall not exceed 21 hours, ie. 3 hours x 7 hours.

144. **What if my user code or account code is duplicated?**

Please contact the ACLS System Administrator immediately for technical assistance as this is most likely to have been caused by a corrupted data index in the database.

145. **I cannot find users in the drop-down list, why?**

*If a user has not accessed ACLS for a period of time, ACLS deactivates the user based on the settings in Configure System. Please search for the user to check their access status.*

146. **How can I replace the system banner, invoice logo, and terms and conditions for online registration?**

Please refer to *Chapter 5.4 Upload System Files* for details.

147. **How do I check ACLS web logon access information?**

Go to *Configure System*, click on *Access Records* button to check the last 100 access records.

148. **How does the scrolling text announcement work?**

Go to *System Settings -> Announcement - Scrolling Text*, enter the message. Please note that messages must be completed within one paragraph and a single quote is not accepted. Remember to select the *Enable Scroller* option before saving.
When it is set up correctly, a scrolling message bar shows up as below:

UNSW staff and students; please update your staff/student number in user profile manager before June 30, 2012.

149. How does the popup message announcement work?

Like the scrolling text setup, when it is set up correctly, an announcement popup message window displays when a user logs in.
150. **What should I do if I see the following error message on the screen when I login to ACLS via the web?**

   *This is an alert message to the System Administrator only. ACLS is comprised of two individual auxiliary programs: logonserver and emailserver. They are designed to synchronize with the ACLS web system all the time. So the error message alerts you to check whether the two programs are running normally on the ACLS server.*

   *The synchronization happens every 5 minutes. However, if the problem persists, please contact us for advice.*
151. What are the general steps required to set up ACLS for the very first time?

The system is delivered with one default setting for each function. You need to perform the following tasks to set up the system:

- Account Manager: Only one default account
- Resource Manager: Only one default resource
- Group Manager: Only four default groups
- School/Org Manager: Only one default school
- Resource Login: Only one default for example

152. We have ACLS configured for booking only. Why do we need tracker installed over the resources such as instruments?

The ACLS tracker provides you a further safeguard for the operation of instruments. For example, without training certificates, users cannot access the instrument.

153. Why do we need to set up different receivers?

This is useful if the staff member in charge is away for a period of time, then you can easily allocate other staff members to take over the work. Again, you are also able to set up multiple receivers instead of a single one.

Go to System Setting -> Email Receiver to set up.

154. How can we correct incorrect usage logs?

This handy tool in Data Logbook Manager makes the usage log data correction much easier for staff members. This tool only applies when you run ACLS Client Logon Program on resource computers. If there is incorrect log data, either missing login or missing logout for each log, the system can pick this up and run the error fixing function for you automatically. The system calculates the longest period of time (on the same day) between the last session and next session depending on the nature of the error and then adds the missing login or logout to generate a complete usage log.

155. How can we set up a home page link in the system footer so users can go back to the organization page anytime?

Go to System Setting -> Configure System, change the parameter Home Page Link to point to your home page.
156. Can we check the sent email message records?

Yes, go to System Setting -> Email Logs. You can search emails by any keywords that are part of the receivers' name and email address, senders' name and email address, subject and resource.

157. Do I have to manually type holidays into the calendar each year?

Not necessary. You can click on Copy Public Calendar to 2018 button to transfer everything from this year to next year. However, you may have to tidy up the calendar to remove those that don’t repeat.

158. Currently the query emails come through my email address, but I am leaving the organization soon. Is it possible to change this?

Yes, go to System Settings -> Configure System, change the parameter ContactUsEmail to the new email address.

159. What is the difference between General Staff and Equipment Supervisor?

Equipment Supervisor is treated like general staff, with accessing power a level below lab manager. However, the equipment supervisor can (staff CAN NOT) set up a training certificate and trainer to the resource he is listed as trainer for. In other words, the equipment supervisors can manage their own resource training set up without the need to contact admin.

160. Where can we find the Terms & Conditions?

On Dashboard, you can access Terms & Conditions. The details of Terms & Conditions can be seen on the fly modal window.
Terms & Conditions

While working in the Biological Resources Animal Holding and Imaging Facility, all users are required to comply with the University's occupational health and safety (OHS) procedures. Users are required to advise staff as soon as possible, or at least 24 hours prior to a booking if they wish to cancel. Failure to do this may result in the booked time being charged to the project. Users may only log time on equipment with the approval of their supervisor(s) and access fees will be charged for all logged instrument time (unless otherwise specified). Failure to appear on time (within 20 minutes) for a booking will forfeit the booked sessions unless staff are notified that you will be late.

All individuals must receive an induction to the facility from the animal technician in charge of the area where your animals are housed prior to entering the facility for the first time. All users of imaging equipment must receive appropriate training and approval to use the instruments from Carl Power or Alan Iwaki.

Users are not allowed to provide access for unregistered users without the specific written permission from Carl Power in relation to the Animal Imaging Facility or the senior animal technician in relation to Animal Holding rooms and related equipment.

Users are not allowed to train other users, whether they are registered or not, unless written permission to do so has been granted for specified instruments by Carl Power. Users are not permitted to undertake any work that is not directly related to a project that [has] has been approved by the Animal Ethics Committee and [are] specifies the user as a researcher on that project.

Users agree to accurately complete all record keeping required by the facility to monitor the use of instruments including electronic or paper log books and booking systems. Users agree to report all faults or irregularities in equipment to a staff member of the facility. Samples are the responsibility of the user and the facility does not accept any responsibility for loss or damage of materials etc., left in the facility. Data is the responsibility of the user and the facility does not accept responsibility for loss or damage of data that has not been removed/copied/archived. Any work that is published or publicly presented, including theses, where all or a part of the work was undertaken in the facility, should acknowledge the role of the facility in providing access or assisting in the work.
8 Future Development

8.1 Standard Packages

The following are some of the new features planned for future implementation. The priority and contents of such implementations are subject to change and depend on demand and available resources. The ultimate objective is to connect the ACLS nodes to form a virtual facility hub for:

- Sharing: resource, knowledge, expertise, solutions, reports and data
- Connection: secured access, live connection with individuals or groups

<table>
<thead>
<tr>
<th>New Features</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System configuration wizard</td>
<td>In addition to Resource Wizard and Training Certification Wizard, we will implement System Configuration Wizard.</td>
</tr>
<tr>
<td>Subscription manager</td>
<td>Providing the required functionality for membership business model.</td>
</tr>
<tr>
<td>Task manager</td>
<td>Providing the tool so lab admin and managers can distribute jobs across the units or institutes.</td>
</tr>
<tr>
<td>ROS integration</td>
<td>Integrate with the university research output service so users and staff publications can be automatically updated in the ACLS user profiles</td>
</tr>
<tr>
<td>Finance integration</td>
<td>Integrate with the university finance system to do the live account validation upon users making bookings</td>
</tr>
<tr>
<td>ACLS tracker upgrade</td>
<td>Integrate with LabArchive for automated data capture</td>
</tr>
<tr>
<td>Tracking samples</td>
<td>Mainly:</td>
</tr>
<tr>
<td></td>
<td>- Quotation set up</td>
</tr>
<tr>
<td></td>
<td>- Periodic reporting</td>
</tr>
<tr>
<td></td>
<td>- Invoicing for selected open sample job</td>
</tr>
<tr>
<td></td>
<td>- Job search with invoicing details resource session data integration.</td>
</tr>
</tbody>
</table>

8.2 Plug-In Modules

Plug-in modules form critical parts of ACLS. Some have been implemented and more effort will be made to improve and develop new modules in future ACLS:
<table>
<thead>
<tr>
<th>Plug-In Module</th>
<th>Description</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Batch Data Report Tool</td>
<td><em>bDRT</em> enables ACLS to produce reports in bulk mode. Further integration with <em>eDM</em> is required.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Batch Invoice Statement Tool</td>
<td><em>biST</em> enables ACLS to generate invoice statements in bulk.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Excel Data Manager</td>
<td><em>eDM</em> offers an Excel data export tool, which can be used to export user data, booking data and usage data via Excel files.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Hub Trust Node</td>
<td><em>hTrustNode</em> is a utility for a corporate level of data sharing. Through it, ACLS can establish a direct link with each individual node for data sharing of current resource status and other information.</td>
<td>Implemented</td>
</tr>
<tr>
<td>iCal Protocol</td>
<td><em>iCAL</em> enables the export and sharing of the booking calendar with local calendar applications, such as Outlook, Thunderbird, Macmail.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Incident Report Ticket Monitor</td>
<td><em>iRTM</em> provides a platform between users and staff to report and respond to incidents at different levels.</td>
<td>To be implemented</td>
</tr>
<tr>
<td>Mobile Access</td>
<td><em>MobileLight</em> is a smart mobile application for iPhone, Android and Windows mobiles.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Survey Creator</td>
<td><em>iSurvey</em> allows you to conduct surveys, to create, publish, and analyse the results.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Publication Analyser</td>
<td><em>iPublication</em> allows you to collect the publication information and to analyse.</td>
<td>Implemented</td>
</tr>
<tr>
<td>LDAP</td>
<td><em>iDAP</em> enables ACLS to integrate with the organization-wide active directory authentication scheme to realize single web access authentication.</td>
<td>Implemented</td>
</tr>
<tr>
<td>Training Event Booking Tool</td>
<td><em>tEB</em> is the training booking tool</td>
<td>Implemented</td>
</tr>
<tr>
<td>User Event Booking Tool</td>
<td><em>uEB</em> is the user booking tool</td>
<td>Implemented</td>
</tr>
<tr>
<td>Video Player</td>

8.3 Research Equipment Management System (REMS)

ACLS has been designed and run as a single node and enclosed system. The demand to run an institutional-wide REMS is growing. The new ACLS Enterprise Solution, namely REMS, will provide an institution-wide REMS with the flexibility to maintain customized control to meet the individual lab demands due to the differences in the nature of research and science.

The following diagram shows the hosting conceptual design (indication only).

App server runs with multiple instances to provide the full capability of backend server. The following diagram indicates the full service instances of the app server. More instances can be added to expand REMS capabilities.
9 Appendix A – Modification for ANFF

ANFF stands for Australian National Fabrication Facility. Customization has been done since 2010 according to the requirements provided by the Melbourne Centre for Nanofabrication (MCN) and ANFF Queensland Node.

This appendix intends to provide an operational guide to the customized ACLS for ANFF.

9.1 Modification for MCN

9.1.1 Background

The modification has been developed for the cost centre or business model running at MCN.

A provisional pricing schedule for MCN, in accordance with ANFF documentation, is indicated below in Table 1.

Table 1: Pricing regimes for basic access to MCN

The key for the pricing schedule is listed below and correlates with the user category

<table>
<thead>
<tr>
<th>Support Provided</th>
<th>PhD Student</th>
<th>University/ PF Researcher</th>
<th>Industry User</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unassisted</td>
<td>A</td>
<td>B</td>
<td>C</td>
</tr>
<tr>
<td>Assisted</td>
<td>D</td>
<td>E</td>
<td>F</td>
</tr>
</tbody>
</table>

Basic consumables are included in the cost price, however, specialized consumables (e.g. substrate materials) or retooling will be charged to the user at cost. Cost for access to flagship instruments is indicated in the top scale of the pricing structure with general lab access and non-flagship instruments (micron scale fabrication) being indicated by the lower end of the scale.

Heavily subsidized access to the resource is available for new device/materials research which requires “proof of principle” in order to secure grant funding. This is strongly encouraged and will be judged on merit by the access committee.

Pricing for public sector researchers is based on marginal costs only. The above charges are subject to review and may be changed without notice.

It is noted that to gain unassisted status, researchers must complete application specific and assessed training provided by MCN in addition to all other induction, occupational health and safety and training requirements.

Note that pricing and access for in-kind equipment and facilities at MCN participant organization’s laboratories will be determined by the facility managers at those laboratories.
Appendix A – Modification for ANFF

</tr>
</tbody>
</table>

The following sections guide you step-by-step to set up the system.

9.1.2 Set Up Charge Category

Go to Utilities -> Charge Category Manager, where you need to set up your charge category. There is no limit to the number of categories, however, it is highly recommended not to exceed 20 or you may get confused.

Click on Full View of Charge Categories to access information panel of charge categories:
9.1.3 Set Charge Category vs Resource

Each resource must set up charge categories before staff can assign the charge category to each user. If the user is not assigned a resource vs charge category, they are not able to make any bookings.

- Go to Resource Manager to set up charge category for each resource:

<table>
<thead>
<tr>
<th>User Category</th>
<th>Charge/HR ($)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Industry (AUS)</td>
<td>100.00</td>
</tr>
<tr>
<td>Industry (non-AUS)</td>
<td>100.00</td>
</tr>
<tr>
<td>Public Funded Researcher (CSIRO, ANSTO, non Universities)</td>
<td>40.00</td>
</tr>
<tr>
<td>University (AUS)</td>
<td>40.00</td>
</tr>
<tr>
<td>University (non-AUS)</td>
<td>100.00</td>
</tr>
</tbody>
</table>

9.1.4 Set Up Charge Category to Users

- Charge category does not apply to staff. In other words, staff are free of charge for bookings
- Each user must be given a charge category before they can make any bookings
- Each staff has the power to set up user charge categories

Please note that each charge category is resource vs charge category, which forms a charge category matrix as per MCN price policy.
Appendix A – Modification for ANFF

Go to User Profile -> User Profile Manager, then find the user for whom you want to set up the charge category, continue to the page of editing user profile, then click on Edit User Charge Category button as in the snapshot below.

Then follow the charge category setup page as below:

Select the resource, and choose the category by clicking on the radio button to complete. You are able to find the charge category list for each user in the field of Charge Category on the user’s profile page.
9.1.5 **Automatic Charge Category for new users**

Through **Charge Category Manager**, you are able to map the relationship by clicking on **Charge Category vs Type of Researcher** as below.

Then map the relationship.

Following approval of online registration, the system automatically sets up a user charge category for each resource accordingly. However, if there is no relationship established between the type of researcher and the charge category, no actions are taken for auto-rollover.

9.1.6 **Automatic Charge Category for New Resource**

You can apply the default charge category for all the users who have no charge category assigned for a particular resource. The default charge category is “assisted”.

In **Resource Manager**, click on **Set Default Charge Category To All Users** button.
Upon completion, the system shows up the number of users who have been assigned the default charge category through this action.

<table>
<thead>
<tr>
<th>User Name</th>
<th>Facility</th>
<th>Charge Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dong Zheng</td>
<td>AC/DC Sputtering</td>
<td>University/ Private Funded Researcher Assisted</td>
</tr>
<tr>

<td>AC/DC Sputtering</td>
<td>University/ Private Funded Researcher Assisted</td>
</tr>
<tr>
<td>test ok</td>
<td>AC/DC Sputtering</td>
<td>PhD Student Assisted</td>
</tr>
<tr>
<td>trash test</td>
<td>AC/DC Sputtering</td>
<td>PhD Student Assisted</td>
</tr>
</tbody>
</table>

Total: 4

This tool only sets the default charge category to those users who have not been assigned a charge category for a resource.

### 9.1.7 Resource vs Charge Category

Upon clicking on Resources vs Charge Category Chart, a page with detailed information is shown for easy reference.

### 9.1.8 Reports and Invoice Statements

The system calculates the charges and generates the reports with the charge category.

### 9.1.9 Online Registration

- Registration page

With respect to the standard, split address fields have been added and the Local Contact field requires users to select at least one of the nominated local staff.
**Supervisor page**

With respect to the standard, split address fields, given name, family name, work phone and email have been added to the new supervisor registration.
• Resource page

With respect to the standard, “Do you want this to be performed by MCN staff?” has been added. The Resource of Interest list can be set up through Resource Manager.

• Submission page

With respect to the standard, a confirmation checkbox has been added on the final confirmation page of the registration form. Users must check the box to accept the agreement before completing the registration.
When you click on the **Submit** button, ACLS will send an email notice to the following parties:

- User who made the registration
- User’s supervisor
- Staff nominated

### 9.1.10 Set Up Local Contacts

Go to **Utilities -> Local Contact Manager**, admin staff can easily set up the list of local contacts as illustrated below:
9.1.11 **Register Supervisors**

Supervisor details can be added or edited in the following format:

![Supervisor Manager](image)

The supervisor address format on the invoice statement is the same.

9.1.12 **Discount Field for Budget Envelop Manager**

A discount field has been added to the budget to deal with discounted charges to the bookings upon monthly rollover. In Budget Manager, you can set up a discount with up to two decimal points.

![Budget Envelop](image)

Once you have done the rollover, the discount field is locked to prevent any further changes. So the discount can apply consistently to each rollover.
9.1.13 **Unassisted and Assisted Bookings**

The following booking functions are done for MCN to replace the standard Resource Booking, User Booking and Training Booking.

- Unassisted Booking
- Assisted Booking

Regardless of the booking tool, a question field is added to the booking event page, and the user must answer either Yes or No.
Unassisted Booking:

Unassisted booking originated from facility booking tool. The booking mechanism is the same.

Assisted Booking:

Assisted booking originated from user booking tool. The booking mechanism is similar. Training booking is incorporated into the assisted booking now.

A new booking template is shown below.

A few new concepts are introduced to this template:
- Staff Time Facility: you need to set up the staff time facility through resource manager.
- Staff Time Hours: if you choose the staff time facility for the booking event, you should select the duration accordingly. The default value is 1 hour.
- Booking for Training: if this event session is for user training, please check the box.

Furthermore, the booking report shows bookings for work for an industry partner separately.

<table>

</tbody>
</table>

9.1.14 Define Business Hours for Reports

Go to System Settings -> Configure System, click on Business Hour Settings to set up.
The Business Hour Settings will be used at the next stage for reporting.

**9.1.15 Stop Booking Confirmation**

For assisted bookings, the system won’t send out a booking confirmation if the **Exclude from Broadcast** setting in the user profile is checked.

**9.1.16 Booking Confirmation for Black Listed Users**

For unassisted bookings, the system will send out a copy of the booking confirmation to the trainers of that resource if the “Black Listed” setting in the user profile is checked.

**9.1.17 Account Discount**

MCN introduces a discount concept to the account setting. Initially, all the discounts are set to zero.

If you wish to change the discount, edit the account.
On the account edit page, you are provided with discount change logs and are able to make changes to the latest discount log in case of mistakes.

Each discount change is recorded at the date of the first day of the month. For example, if you change the discount from zero to 2.00 (2%) on 11/10/2013, then the system records the change effective date as 1/10/2013. By doing so, each discount is taken into the monthly usage calculation as a monthly discount.

**9.1.18 Reports and Invoices**

All the reports and invoices are integrated with the account discount.
9.1.19  Track User Category Change

A tracker has been implemented to track any changes in user category so the system can accurately report the charges and billings. For example, user James books SEM230 on 1 July with user category “A”, then his category is changed on 2 July to category “B” and he makes bookings on 5 July. When the system runs the report and invoicing, it uses category “A” rate to calculate the charge for the bookings on 1 July, and category “B” rate for the bookings on 5 July, respectively.

You can check user category charge records through Charge Category Change Log.

9.1.20  Broadcast Messages To Newly Trained Users

‘To Newly Trained Users’ is added. Click on To Newly Trained Users to access. As usual, type in subject and message body, select a period from last month to last 12 months, then click on ‘Send Message’. The system sends the message to all the newly trained users for the selected period of time.
For example, if you choose 2 for Last Period in Month, the message is sent to the users who received training in the last two months.

9.1.21 Client Job and Non-Client Job Accounts

Client Job and Non-Client Job concept is added to account settings. By default, all accounts are client job account type. This setting is for reporting.

9.1.22 MCN Instruments – Hours of Usage

Hours of Usage summarises the usage each month in the format of MCN requirements. Two options are available: Single resource hours of usage and Multiple resource hours of usage:
The process between single resource and multiple resources is the same. Choose the resource, select start month and end month, then click on **Continue** button.

In the example below, two facilities are selected:

**Export to Excel:**

You are able to export the hours of usage to Excel anytime. Two file naming protocols are defined as follows:

- **Single resource:** The format of the file name is ‘resource name-startmonthyear-endmonthyear-dateofcreation’
Appendix A – Modification for ANFF

- Multiple resources: The format of the file name is ‘multiplefacility-startmonthyear-endmonthyear-dateofcreation’

9.1.23 FOB for User Profile

FOB tab is added to each user profile, only admin can change FOB properties:

- FOB title
- FOB type
- FOB reg date
- FOB expiry date

All users and staff FOB require expiry date.

Staff and users can view FOB information through My Profile.

9.1.24 Set Up Multiple Booking Permission

Go to Resource Manager to set up multiple booking at the same time, once the checkbox is ticked, the selected resource can be booked multiple sessions at the same time.
9.1.25 Multiple Booking on Calendar

- Timeline calendar:
Appendix A – Modification for ANFF

- **Unassisted calendar:**

  3D Printer Autodesk Ember

- **Assisted calendar:**
9.2 Modification for ANFF WA Node

9.2.1 Background

The essence of the problem that we have is that we want to book a tool overnight to reserve the time and ensure that no one else books it, but we do not want for the overnight
hours to be counted and reported in the excel usage reports that we generate for reporting of facility usage hours.

We adopt the proposed option “Somewhere in the settings for a tool we tick a box “do not include in excel reporting overnight hours booked between 8pm and 10am.”.

### 9.2.2 Resource Setting Changes

A special ANFF WA setting is added to the resource profile in Resource Manager to configure the resource for the special reporting hour control.

- **Report Enabler:** tick to enable the special hour control for report. If unchecked, report hours are calculated as usual. If checked, the report start time and end time are used to calculate. For example, the booked hours from 9 to 16, the report start time is 10 and end time is 15, the calculated usage hours are 5 instead of 7.
- **Report start time:** starting hour to count as reporting usage or booked hours.
- **Report end time:** ending hour to count as reporting usage or booked hours.
9.2.3 Report Manager

Operation and training hour report are implemented with the reporting hour controls.

ANFF WA Hours are added to the report as shown below. Both monthly and period reports are modified. Batch reports applies the same changes as well.
IHMRI stands for ILLAWARRA HEALTH AND MEDICAL RESEARCH INSTITUTE. Customization has been done since 2011 according to requirements provided by IHMRI.

This appendix provides an operational guide to the customized ACLS for IHMRI.

10.1 Background

**Equipment Maintenance Management functions**

Users and managers need to know when equipment is not available due to being faulty or damaged, or for a scheduled maintenance/service. In addition, a fault notification system needs to be included to allow users to notify the system and therefore management if and when any equipment is faulty, a brief description of the incident or fault, the extent of the damage, and urgency of response needed.

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green light</td>
<td>Equipment all ok</td>
</tr>
<tr>
<td>Amber light</td>
<td>Needs maintenance but can continue working</td>
</tr>
<tr>
<td>Red light</td>
<td>Needs maintenance, equipment inoperable</td>
</tr>
<tr>
<td></td>
<td>Incident, other equipment damaged</td>
</tr>
</tbody>
</table>

In the latter situation the whole room would be shut. In this case all related equipment housed in the same room would need to be marked as “red light” so all users can see they can’t access it. Any user who has booked the equipment in the next X period (day? week?) should be emailed that an incident has occurred that might limit their access to the booked equipment, and to see lab staff regarding maintenance timeframes.

IHMRI requires that lab staff can schedule regular periods when equipment will be out of service (ie un-bookable) for maintenance. This is best done as they add each new piece of equipment to the resource group. At this time, the periodic maintenance requirements and costs, and contractor/maintenance supplier contact details should be added, as well as the cost of the item purchased, and when it is due to be replaced. The dates of each of these events could then be used to provide enhanced ability to pro-actively manage the equipment via the Dashboard, see below.

Other functions required include:

- Repair/maintenance schedules, that show up on the Dashboard as a reminder to organize them
- Records of all repairs/maintenance and costs, who performed them, what the problem was, etc
- Records of whether works were scheduled or unscheduled
- A place to record:
  - Original cost of item
  - Depreciation
  - Details of service contracts – cost, and what it covers
  - Lifespan of item
Appendix B – Modification for IHMRI

- End of Life calculation, that warns on the Dashboard when it’s drawing close (more notice for more expensive items)
- Asset numbers
- Suppliers and supplier details
- Details of required software
- Whether it is networked or not
- Plus an extra notes section for recording things such as computer passwords and anything else we’ve forgotten.

**Terminology**

Before continuing to the new features implemented for IHMRI, it is worthwhile to address the terms used throughout the system and this document.

- Service: refers to “unscheduled service”
- Maintenance: refers to “scheduled maintenance”
  - Internal maintenance: performed by local staff
  - External maintenance: performed by external company
- Incident: refers to anything users wish to report to staff about a resource according to the pre-set incident category
- Asset: refers to “any resource” to be registered as an “asset”. So an asset must be a resource, but not vice versa
- Material: refers to any materialized items, be they hard material, software, or an application
- Labour: refers to any work involved
- Resource Assembly: refers to assembly parts or components of a resource

10.2 2018 Requested Changes

**Booking Home Page (General and System Administrators)**

- Hide Resource Catalogue

**Dashboard (General and System Administrators)**

- We want to see the following:
  - My Home (Hide Forms, Resource Catalogue, Corea Analytics)
  - My Profile
  - Training Records
  - Resource Status
  - Resource Alerts

**Incidents (General)**

- Disable Incident section for non-system administrators

**Contract (Funding)**

- Purchase Date
- Funding Category (create drop-down list via Register Funding Category)
- Cost Centre Owner (create drop-down list via Register Cost Centre Owner)
- Cost Centre Number (max length 30)
- Amount ($)
- Notes

**Finance Report**

- Create a Funding Report (with total amount calculated for each resource):
  - Resource Group
  - Resource Name
  - Resource Assembly
  - Purchase Date
  - Funding Category (create funding drop down list)
  - Owner
  - Cost Centre Number
  - Amount ($)
  - Notes

**Register Funding Category**

- Create something similar to Incident Category Editor

**Contract Record Desk**

- For Contract (Maintenance) and Contract (Warranty) can we please make sure that the Reminder Date remains ticked when editing.

**Incident Date**

- We want to select the Incident Date instead of it automatically selecting the day it was reported on the Booking System

**Search Resource Profile**

- Add ‘Maintenance Agreement Number’ to the search criteria.
Flow Chart of Process
The following chapters relate directly to the process set out in the flow chart.

10.3 How to Set Up Incident Category

First of all, you need to set up the Incident Category so that users can lodge the incident properly. Go to *Maintenance Resources* to click on *Register Incident Category*.

The parameters of the settings are described in detail as follows:

- Incident Category Title: the name of the category
- Ownership of Actions: staff listed as owner of the category will receive the incident notification

10.4 How to Report an Incident (System Administrator Only)

Through *Incident*, you can easily browse the incident menu as illustrated below.
Click on **Report Incident** to lodge an incident:

![Report Incident]

**Submission of Incident**

- **Resource Group**
- **Resource**
- **Incident Category**
- **Incident Description**
- **Incident Date**

Then Submit. Upon submission, the system sends an email notification to the staff-in-charge, the owner(s) of the incident category.

### 10.5 How to Respond to an Incident

The system shows the reported incidents on My Attention, simply click on **To Update** or **To Respond** next to each incident to start your action.
The “i” information box shows up the incident report and last responding information, including action note for reference.

On this page, you are shown full information about the incident and need to fill out the processing details to complete the action:

- Processing status: open or closed
- Incident description: able to be edited by staff to update the original description submitted
- Light indicator:
  - Green to represent normal
  - Amber to represent minor faults
  - Red to represent medium faults
  - Flash Red to represent severe faults

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green light</td>
<td>Equipment all ok</td>
</tr>
<tr>
<td>Amber light</td>
<td>Needs maintenance but can continue working</td>
</tr>
<tr>
<td>Red light</td>
<td>Needs maintenance, equipment inoperable</td>
</tr>
<tr>
<td>Flash Red Light</td>
<td>Incident, other equipment damaged</td>
</tr>
</tbody>
</table>

- Level of Actions: as stated above, 4 to choose from
- Company: select service company from the list
- Action Note: for action messages
- Unscheduled Service Bookings:
  - If you enable a service booking, then you need to select start time and end time

The history of response is shown at the bottom of the page. Simply click on and more … to view details.

When you click on Continue button, the system shows you the final page to confirm and complete:

If you want to make changes before the final completion, click on Edit to go back to the previous data entry page. Or click on Complete to submit the response.

10.6 How to Search for an Incident

Multiple searching tools are provided to find incidents: by status, by resource and by incident category. They are only accessible to staff members.

My Reported Incidents offers users a tool to check their reported incident details.
Appendix B – Modification for IHMRI

See example below, searching all open incidents:

<table>
<thead>
<tr>
<th>Incident Number</th>
<th>Facility</th>
<th>Unit Responsible</th>
<th>Incident Category</th>

<td>LAB</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Clicking on **Processing Details** to explore all processing records. You may choose not to close the incident ticket each time you process it, so you can check the historical records for multiple responses to the incident ticket.
10.7 How to Make Scheduled Maintenance & Unscheduled Service Bookings

By default, all unscheduled service bookings can only be made through the incident response process.

Before going into this subject further, let’s look at how to set up a few things first:

- Register Company:

  Go to **Maintenance Resources -> Register Company.**

You are able to add and edit companies as required. Here is the template to enter the relevant data:
Appendix B – Modification for IHMRI

Up to three contacts can be added for the same company. To remove a company from the active list, simply uncheck the box of “Enabled”.

- **Register Resource Profile:**

  Following a request made by IHMRI, we introduced the new concept of Resource Assembly to manage the asset by both Resource and Assembly (one level down).

  You can set the resource assembly through **Resource Manager.**
Here is an example of the resource assembly chart:

We need to define the term asset: In the system, an asset must be a resource or resource assembly, but a resource or resource assembly does not have to be an asset. Before you are able to register a resource assembly as an asset, you must register its resource as a resource profile first.

Register Resource Profile

Asset data fields are defined as following:

<table>
<thead>
<tr>
<th>Purchase Date</th>
<th>15.7.10</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original cost of item</td>
<td>$155,000</td>
</tr>
<tr>
<td>Depreciation</td>
<td>5%pa</td>
</tr>
</tbody>
</table>
| Details of service contracts – cost, and what it covers | Cost: $15,000 per year  
Covers: 2 x scheduled maintenance per year, parts for scheduled maintenance, travel time. Does not cover services for breakdowns |
| Lifespan of item    | 7 yrs   |
| End of Life calculation, that warns on the Dashboard when it’s drawing close (more notice for more expensive items) | 15.7.17 |
| Asset numbers       | 12 588746 48976 (the number will come off a barcode issued by the university) |
| Location            | Bldg 32.115 |
| Suppliers & supplier details | KI Scientific  
41564 Smith Street  
Sydney | 6351 6112 |
| Fax                 | 4543 1454 |
| Contact             | Peter Jones |
| Email               | pjones@ki.com.au |
Appendix B – Modification for IHMRI

<table>
<thead>
<tr>
<th>Details of required software</th>
<th>Software is called ‘flowjoe’. Needs to work from Mac with OS10.4 or higher.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Whether it is networked or not</td>
<td>Yes, data point number A-226</td>
</tr>
<tr>
<td>Extra notes section to record eg computer passwords and any extra information</td>
<td>Password for software is: ihmri446</td>
</tr>
</tbody>
</table>

Here is the template to enter the asset data (resource as asset):

![Register Resource Profile](image)

AC LAB SYSTEM 279
Data entry is explained as below:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resource</td>
<td>Not editable</td>
</tr>
<tr>
<td>Manufacturer</td>
<td>By selection</td>
</tr>
<tr>
<td>Asset Number</td>
<td>As per your local requirement</td>
</tr>
<tr>
<td>Purchase Order Number</td>
<td>As per your local requirement</td>
</tr>
<tr>
<td>Model Number/Name</td>
<td>As per your local requirement</td>
</tr>
<tr>
<td>Serial Number</td>
<td>As per your local requirement</td>
</tr>
<tr>
<td>Location</td>
<td>Where it is located</td>
</tr>
<tr>
<td>Original Cost</td>
<td>Purchase price of the resource</td>
</tr>
<tr>
<td>Purchase Date</td>
<td>Date of procurement</td>
</tr>
<tr>
<td>Depreciation/Year</td>
<td>Percentage</td>
</tr>
<tr>
<td>Lifespan</td>
<td>Number of Years</td>
</tr>
<tr>
<td>End of Life calculation</td>
<td>Date of selection</td>
</tr>
<tr>
<td>Current Value After Depreciation</td>
<td>Calculated by the system automatically</td>
</tr>
<tr>
<td>Resource Networked</td>
<td>Yes/No</td>
</tr>
<tr>
<td>Software Details</td>
<td>Detailed description of software</td>
</tr>
<tr>
<td>Passwords</td>
<td>Password for applications</td>
</tr>
<tr>
<td>Notes</td>
<td>For anything you wish to record</td>
</tr>
</tbody>
</table>

To record the contract, click on **Contract Record Desk** at the bottom of the page.
There are 4 types of contracts defined as follows:

- **Consumables:**
  
<table>
<thead>
<tr>
<th>Purchase Date</th>
<th>Description</th>
<th>Quantity</th>
<th>Total Cost</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calendar selection</td>
<td>Drop down list of active consumables from registry</td>
<td>$ = Automatically calculated based on quantity entered and total cost in registry</td>
<td></td>
<td></td>
</tr>
<tr>
<td>01/01/12</td>
<td>Formalin, 5 L bottle</td>
<td>2</td>
<td>$24</td>
<td></td>
</tr>
</tbody>
</table>

- **Warranty / Maintenance:**
  
<table>
<thead>
<tr>
<th>Purchase Date</th>
<th>Manufacturer / Service Provider</th>
<th>Valid From</th>
<th>Valid To</th>
<th>Total Cost</th>
<th>Status</th>
<th>Years</th>
<th>Cost per calendar year*</th>
<th>Contract pdf</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calendar selection</td>
<td>Drop down list Calendar selection Calendar selection</td>
<td>$ = Automatically calculated based on valid until date &lt; current date</td>
<td>$ = Calculated from total cost, number of years, and valid to/from dates</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>13/12/08</td>
<td>Thermo</td>
<td>01/01/10</td>
<td>31/12/11</td>
<td>$1500</td>
<td>Inactive</td>
<td>2</td>
<td>$750</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10/12/11</td>
<td>Thermo</td>
<td>01/01/12</td>
<td>31/12/14</td>
<td>$2000</td>
<td>Active</td>
<td>2</td>
<td>$1000</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- **Service:**
  
<table>
<thead>
<tr>
<th>Service Date</th>
<th>Incident Number</th>
<th>Manufacturer / Service Provider</th>
<th>Total Cost</th>
<th>Contract pdf</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calendar selection</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>05/03/10</td>
<td>4</td>
<td>Thermo</td>
<td>$1000</td>
<td></td>
<td></td>
</tr>
<tr>
<td>16/09/10</td>
<td>12</td>
<td>Thermo</td>
<td>$500</td>
<td></td>
<td></td>
</tr>
<tr>
<td>01/3/11</td>
<td>35</td>
<td>Thermo</td>
<td>$650</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- **Purchase:**
  
  | Contract pdf | Notes | |
  |-------------|-------| |

You can add as many contracts per asset as you wish.
Types of contract are predefined in the system:

- Consumables
- Maintenance
- Service
- Purchase
- Warranty
Click on **and details** to see each contract under contract type. Through this option you are able to register contracts by different types.

- **Fund:**

  ![Register Resource Profile](image)

  CONTRACT RECORD DESK  
  Resource: 80C Freezer (5), 32.GSB  
  Asset Number: 22004569

<table>
<thead>
<tr>
<th>Contract Type</th>
<th>Funding</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purchase Date</td>
<td>16/07/2018</td>
</tr>
<tr>
<td>Funding Category</td>
<td>Choose funding category from the list:</td>
</tr>
<tr>
<td>Cost Centre Owner</td>
<td>Choose cost centre owner from the list:</td>
</tr>
<tr>
<td>Cost Centre Number</td>
<td></td>
</tr>
<tr>
<td>Amount ($)</td>
<td></td>
</tr>
<tr>
<td>Notes</td>
<td></td>
</tr>
</tbody>
</table>

- **Register Consumables:**

  You are able to register new consumables, and edit those with active status.

  ![Register Consumable](image)

  Key Words: (description, supplier, catalogue number, notes)

  Search by: Active (66) Inactive (32) All (98)

  To find the registered consumables, simply type keywords to find them. If keywords are not entered, search for all.
For consumables with inactive status, you can only edit those that have expired less than 30 days. Here are the details of consumable parameters:

<table>
<thead>
<tr>
<th>Description</th>
<th>Cost</th>
<th>Supplier</th>
<th>Catalogue Number</th>
<th>Valid From</th>
<th>Valid Until</th>
<th>Status</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Text box (at least 75 characters)</td>
<td>$</td>
<td>Drop down list of manufacturers from company registry</td>
<td>Calendar selection</td>
<td>Calendar selection</td>
<td>Automatically calculated based on valid until date &lt; current date</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Nitrogen Gas, G-size cylinder</td>
<td>$12</td>
<td>BOC</td>
<td>123</td>
<td>01/01/10</td>
<td>Active</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Reporting and tracking consumables will be implemented in the next stage.

- Scheduled Maintenance Bookings:

You have the option to choose the booking type: internal or external. The difference between the two is that you don’t need to select the company for internal maintenance bookings.
10.8 Contract Reminder Alert

The contract reminder alert applies to maintenance and warranty contracts. Upon activating the alert, an email alert will be sent out to the staff (set up through email receivers).

Go to Email Receiver to set up the proper receivers for the contract expiry alerts.

10.9 Search Contract

Searching contract page is modified to suit IHMRI needs.

<table>
<thead>
<tr>
<th>Resource</th>
<th>Search Criteria (optional)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resource Group</td>
<td>Search Criteria (optional)</td>
</tr>
<tr>
<td>Resource Assembly</td>
<td>Search Criteria (optional)</td>
</tr>
<tr>
<td>Company</td>
<td>Search Criteria (optional)</td>
</tr>
<tr>
<td>Type</td>
<td>Tick boxes for: All, Consumable, Breakdown, Maintenance, Purchase, Warranty</td>
</tr>
<tr>
<td>Dates</td>
<td>Search Criteria – start date and end date (optional)</td>
</tr>
</tbody>
</table>
10.10 Access to Resource Lifespan

Through Report Manager -> Resource Lifespan Summary, you are able to see the lifespan summary as below:

![Resource Lifespan Summary](image)

If you don't enter any keywords to search, the system will show all facilities.

10.11 Finance Report

The objective of the finance report is to provide an overview of cost factors of asset contracts. Three report types are given for selection:

- Summary by resource
- Summary by contract type
- Itemised report

Through the option table as below, you can sort the report by a number of options.
Appendix B – Modification for IHMRI

Through the resource group, resource and resource assembly are linked for selection. The report depends on the selections as described below:

- If a resource group is selected ONLY, then the report runs against the selected resource group
- If a resource is selected ONLY, then the report runs against the selected resource
- If resource assembly is selected ONLY, then the report runs against the selected resource assembly
- If no resource group is selected, then the report runs against all the resources

**Summary by Resource:**

The screenshot below is a summary by resource for the resource group ‘LAB – CENTRIFUGES’.
Appendix B – Modification for IHMRI

Summary by Contract Type:

The screenshot below is a summary by contract type for the resource group ‘LAB – CENTRIFUGES’.

<table>
<thead>
<tr>
<th>Facility</th>
<th>Facility Group / Contract Type</th>
<th>Total Cost Per Year</th>
<th>Total Amount Spent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Centrifuge, Boutique Prima, 07.321</td>
<td>LAB – CENTRIFUGES Maintenance</td>
<td>$796.16</td>
<td>$796.16</td>
</tr>
<tr>
<td>Total Centrifuge, Boutique Prima, 07.321</td>
<td></td>
<td>$1592.32</td>
<td>$1592.32</td>
</tr>
<tr>
<td>Centrifuge, MT1515, 32.311</td>
<td>LAB – CENTRIFUGES Maintenance</td>
<td>$796.16</td>
<td>$796.16</td>
</tr>
<tr>
<td>Total Centrifuge, MT1515, 32.311</td>
<td></td>
<td>$1592.32</td>
<td>$1592.32</td>
</tr>
<tr>
<td>Centrifuge, R10, 32.209</td>
<td>LAB – CENTRIFUGES Maintenance</td>
<td>$796.16</td>
<td>$796.16</td>
</tr>
<tr>
<td>Total Centrifuge, R10, 32.209</td>
<td></td>
<td>$1592.32</td>
<td>$1592.32</td>
</tr>
<tr>
<td>Centrifuge, R10, 32.211</td>
<td>LAB – CENTRIFUGES Service</td>
<td>$932.00</td>
<td>$932.00</td>
</tr>
<tr>
<td>Total Centrifuge, R10, 32.211</td>
<td></td>
<td>$1964.00</td>
<td>$1964.00</td>
</tr>
<tr>
<td>Centrifuge, R10, 32.212</td>
<td>LAB – CENTRIFUGES Service</td>
<td>$932.00</td>
<td>$932.00</td>
</tr>
<tr>
<td>Total Centrifuge, R10, 32.212</td>
<td></td>
<td>$1964.00</td>
<td>$1964.00</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td>$3148.56</td>
<td>$3148.56</td>
</tr>
</tbody>
</table>

Itemised Report:

The screenshot below is an itemised report for the resource group ‘LAB – CENTRIFUGES’.
Appendix B – Modification for IHMRI

The itemised report does not include assets as the contract type is not available for assets. Assets can have a few contract types, but assets are not contract types.

Note: The finance report can be exported to EXCEL. This capability is not available yet.

10.12 Booking Report

Booking Report is modified to provide an option table, so you can generate the following report types.

- Summary by resource
- Summary by booking type
- Summary by supervisor
- Itemised report

In this modification, the concept of ‘Report – Hours per Day’ is introduced. To make it work, you need to go to Resource Manager to set this up for each resource. The default is zero.
Appendix B – Modification for IHMRI

Facility Image

Description

Location

Facility Type  Research Equipment
Catalogue Access  Local
Min Hour per Session  1
Min Booking Unit  1 hour
Report - Hours per Day  0.00

</tr>
</thead>
</table>
10.13 Resource Category

Resource category is added to the resource profile for reporting purpose.

10.14 Set Up Unit Responsible

Unit Responsible is required to manage each resource group in IHMRI to own the following services.

- Who responds to *Training and Support Requests*
- Who responds to *Incidents*
- Who issues *Training Certificates*
Appendix B – Modification for IHMRI

Go to **Staff -> Unit Responsible Manager** to set up.

![Unit Responsible Manager](image)

Go to Resource Manager, Unit Responsible is assigned to each resource group.

![Facility Manager](image)

10.15 Set Up User Theme

User Theme comes with the three choices at this stage would be ‘Chronic Conditions and Lifestyle’, ‘Diagnostics and Therapeutics’ and ‘Mental Health and the Ageing Brain’.

Go to **System Settings -> User Theme** to set up.

![User Theme](image)

10.16 FAQ

1. **What happens after an incident submission by users?**

   *Staff-in-charge will receive an email notice. If staff do not respond to the incident, nothing is alerted through View Bookings and Resource Status.*
2. Why does the damage level indication show “unknown” on My Dashboard?

*It means that this request has not been responded to yet, so damage indication is unknown.*

3. Why are there two buttons for lodged incidents: “To Update” and “To Respond”?

*If the incident has been responded to by staff but is not closed yet, then the system shows “Update”, waiting for further action. If there has been no response by staff yet, then the system shows “Respond”.*

4. Can we edit the response if we make mistakes?

*No, the system needs to record each response on the original form regardless. You can update later to correct mistakes.*

5. Can we edit the original incident description written by users?

*Yes, you can.*

6. What happens after staff respond to an incident?

*After responding to a reported incident, the system carries out the following actions:
- The system sends an email notification to the reporting user to inform them that the incident has been responded to. However, this occurs for the initial response only.
- Shows the operation status on Resource Status page.*

7. How do we get an explanation of an incident light indicator?

*Move the mouse over the light indicator and a text box appears with an explanation.*

8. Can we edit and cancel scheduled maintenance and unscheduled service bookings?

*Yes. For scheduled maintenance bookings, you can do this through Booking Calendar page. Alternatively, you can edit or cancel both types through Data Logbook Manager.*

9. Do we have to set up asset to resource before making maintenance and service bookings?

*This is not necessary.*

10. Can we search resource profiles by keywords?

*Yes, you can search easily using keywords as illustrated below.*

11. Can we search contracts by keywords?

*Yes, you can.*
12. What are the criteria to set up consumables?

You can only have one valid consumable with the same name at any one time. So when you register a consumables contract, you can pick the correct one with the selected date.

13. Can we upload more than more documents per contract?

Yes.

14. Can we issue training certificate to the user to record trainer and training date?

Yes. Go to user profile to edit user certificate.
11 Appendix C – Modification for IFM

IFM stands for INSTITUTE FOR FRONTIER MATERIALS, GTP RESEARCH, DEAKIN UNIVERSITY. Customization has been done according to the requirements provided by IFM.

11.1 Define Business Hours

Go to System Settings -> Configure System -> Business Hour Settings to set up.

Business hour settings will be used to identify ‘Out-Of-Hour’ bookings.

11.2 Set Up Technical Manager Group and Security Officer Group

Two new generic groups are added to ACLS: Technical Manager and Security Officer. You need to go to Access Group Manager to set up the appropriate groups against the generic group settings. Then you can set the access group for the users who are security officers or technical managers.

For security officer group, booking settings are irrelevant as they are not allowed to book.

11.3 Set Certificate Expiry Control

A new expiry date control is introduced to the certificate expiry mechanism. If “valid to expiry date” control is set, then the user certificate expires upon the expiry date. Go to Training Manager, pick a resource and click on Certificate Registration.
Appendix C – Modification for IFM

There are two options for certificate expiry mechanism:

- **Valid Period**: user certificates expire after the valid period following the last access to ACLS.
- **Valid to Expiring Date**: Once you set this to ON, the certificate expires on the expiry date regardless of the access to ACLS of the users holding the certificates.

AC LAB SYSTEM 296
11.4 Booking Summary View

Booking Summary View is implemented according to IFM requirements. There are two views available:

- Lab trainer view
- Security view

**Lab Trainer View:**

Technical managers and lab trainers can approve ‘unapproved’ bookings from this view. This view is grouped and sorted by the resource groups. You are able to toggle the booking status view of each resource group by clicking on the links.

Technical managers can access both lab trainer view and security view. The summary provides the following booking status:

- Last 6 hours
- Current
- Next 6 hours

**Security View:**

Security view is the security officer’s view of bookings. This view is grouped and sorted by resource locations.
11.5 Approve Out-of-Hours Bookings on My Attention

On ‘Approve Bookings’ and ‘Approve Out-of-Hours Bookings’, you are able to see the latest user training record and contact users by email if needed.

11.6 Account Owners

Account owners are required by IFM so ACLS can generate invoices either account owners or user’s supervisor.

Go to Account Manager to add the account owner and email. By default, all the existing accounts have no account owner and owner email.

If account owners are not set up, then you won’t be able to run account owner invoices.
11.7 Account Owner Invoices

In ACLS, there are two functions to create invoices: Resource Booking Invoicing and Resource Batch Invoicing.

- Resource Booking Invoicing:

  You are able to generate single invoices as the function name is stated.

  Supervisor invoicing is the same function as what you are familiar with. The account owner invoicing is the newly implemented.
**Resource Batch Invoicing:**

You are able to generate batch invoices as the function name is stated. The entire batch invoicing is re-designed to be consistent with the tile design concepts.
11.8 High charge bookings

First of all, you need to set up default high charge value to the resource via Resource Manager.
Appendix C – Modification for IFM

- Set up default high charge amount

You can flush all resources high charge amount to the default value anytime.

- Set up resource high charge amount

System emails to account owner if the charge is higher than the pre-set high charge value in the resource profile.
## 11.9 Risk Level

Risk level only applies to the unapproved bookings. As normal, you need to click Dashboard -> Approve Bookings to approve or decline the unapproved bookings.

Upon opening Approve Booking tile, you see all the unapproved bookings for action. Medium Risk checkbox is added for risk level decision.

Tick the Medium Risk checkbox to mark up the booking as medium risk level booking.

### 11.10 Display Booking Risk Level

On all the calendars, all the approved bookings are shown the risk level if the risk level is ticked when approving.
11.11 Display Risk Level in Security View

Medium risk is added to the booking details as shown in the following snapshot:

This applies to both summary view and security view. If booking note is available, click on Bookmark icon to open the detail console.
11.12 FAQ

1. How does the “Valid to Expiring Date” work?

   When a trainer issues a certificate to a user, the system sets the expiry date from the date of issue to the last day of the valid period. For example, if the certificate valid period is set to 12 months, and the certificate is issued on 1 Jan 2014, then the expiry date is 1 Jan 2015. The certificate expires on 1 Jan 2015 regardless of user access to the system.

2. Are there any changes to the way certificates are issued?

   No. However, if you wish to extend the certificate with a new expiry date, you need to cancel the current certificate, and re-issue it. The system cannot change the expiry date automatically.

3. What are the major differences between lab trainer view and security view?

   On lab trainer view you can approve ‘unapproved’ bookings’ but this cannot be done on security view.

4. What is the view upon security officer login?

   Upon login, security officer can only access the security view, through computer or mobile.
12 Appendix D - Modification for CSIRO

This appendix intends to cover the information about charge changes to the standard ACLS for CSIRO.

We have decided that we need the Category Manager module, as mentioned in Appendix A – Modification for ANFF, as we would like to have more than the current 2 default options of Internal or External.

12.1 Step 1: Set up Charge Category

Go to Utilities -> Charge Category Manager, set up the charge category.

12.2 Step 2: Set up Charge Category vs Type of Researcher

Click on Charge Category vs Type of Researcher button on Charge Category Manager page. The purpose of setting this up is to set up the initial charge category upon approving a new user registration.

12.3 Step 3: Set up Charge Category for each resource

Go to Utilities -> Resource Manager. Depending on the number of charge categories, you can set up the charge rate per category against each resource. This charge rate will be used for cost calculation in reports and invoices.

12.4 Step 4: Set up Charge Category vs Resource for each user

Go to User Profile -> User Profile Manager, find the user and edit their profile. The charge category settings are shown in the screenshot below.

To change or set up Charge Category, click on Edit User Charge Category. Then the system shows the charge category vs resource page for selection.

In the above example, if you book SEM - Tescan MIRA/TIMA, then you are charged the category #2 charge rate defined in Resource Manager.
The system tracks the change of user category in day unit. In other words, if you have checked “Category #1” for resource “SEM - Tescan MIRA/TIMA” from 20/7 to 25/7, and checked a new charge category “Category #2” from 26/7 to the future, the booking cost calculation is based on the different rates for the booking times accordingly.

You must set up the charge category per user for all users. If the system cannot locate the charge category for a user, the booking cost to the user is zero.
13 Appendix E – Modification for OSLO

This appendix intends to cover the information about changes for Oslo University to many aspects of ACLS. In short, they are:

Change to standard version:

- System settings:
  - Add microscopy type settings
- Staff resources:
  - Add charge category settings
- Resource manager:
  - Add charge rate matrix for resource vs charge category
  - Add charge rate change tracking
- Online registration:
  - Add microscopy type selection
  - Add charge category selection
- User profile:
  - Add microscopy type selection
  - Add charge category selection
- Booking calendar:
  - Replace all the tools with ‘Unassisted’, ‘Assisted’ and ‘Service’ booking tool
  - Unassisted booking:
    - Set 13:00 as breakline for the general user, only applies to weekdays
    - Add “Assistance Required” checkbox to the event window
  - Assisted Booking:
    - Add “Assistance Required” checkbox to the event window
- Apply charge rate according to the charge table below
- Report manager:
  - Apply charge rate according to the charge table below to booking report and batch report
- Invoice manager:
  - Apply charge rate according to the charge table below to booking report and batch report

<table>
<thead>
<tr>
<th>Assistance</th>
<th>Department of Biosciences</th>
<th>University Of Oslo</th>
<th>Other Academic</th>
<th>Industry</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
<td>B</td>
<td>C</td>
<td>D</td>
</tr>
<tr>
<td></td>
<td>E</td>
<td>F</td>
<td>G</td>
<td>H</td>
</tr>
</tbody>
</table>

- The letters stand for different prices.
- Assistance means that the lab staff is doing the work for or is actively helping the user. This will be more expensive, hence a different price. If “assistance required” box is checked, then apply the assistance rate with “+”; if not, apply “-”.
13.1 To Set Up Microscopy Type

Go to **System Settings -> Microscopy Type** to continue.

![Microscopy Type](image)

13.2 To Set Up Charge Category

Charge Category is required to apply the proper rate to the bookings for reporting and billing.

Go to **Utilities -> Charge Category Manager** to continue.

![Charge Category Manager](image)

13.3 Online Registration and User Profile

*Microscopy Type* and *Charge Category* are added to both. In particular, the Charge Category is required to define the charge rate vs resource over time.

The other fields remain unchanged for online registration and user profile.
13.4 Booking Calendar

According to the modification requirements, the booking calendar is re-designed to provide the following 3 booking tools:

- Unassisted: available to users and staff, users can choose ‘assistance required’ if needed
- Assisted: available to staff only, staff can use this tool to book for users, if ‘assistance required’ is checked, then the booking session is under assistance
- Service: same as the standard version

To set the booking event as an assistance session, you must check the box ‘Assistance Required’, so the assistance charge rate applies.

For general users, 13:00 time breakline is validated to ensure they can only book either before 13:00 or after 13:00. A warning sign shows up if that occurs.
Appendix E – Modification for OSLO

- No booking session can cross 13:00. This rule applies to weekdays only.

13.5 To Set Up Charge Rate

Through **Utilities -> Resource Manager**, you are able to set up the proper charge rate.

<table>

</table>
The system shows the change tracking over month. In other words, each change applies per month. For example, if you change the rate on Jan 8, the changes take effect from Jan 1.

Please note that changes are recorded in pairs, +/- or assistance/non-assistance.

13.6 Report

All the reports are compiled using the charge rate that is valid during the month. For example, it is March 2015 now, if you run the report for Jan 2015, the charge rate applied is the one valid in Jan 2015.

In the screenshot below, + means booking hours with assistance, - means booking hours without assistance.

![Booking Report - Resource]

13.7 Invoice

All the invoices are compiled using the charge rate that is valid during the month. For example, it is March 2015 now, if you run the report for Jan 2015, the charge rate applied is the one valid in Jan 2015.

In the screenshot below, + means booking hours with assistance, - means booking hours without assistance.

### Appendix E – Modification for OSLO

AC LAB SYSTEM
14 Appendix F – Modification for CMCA

This appendix intends to cover the information about changes for CMCA, University of Western Australia to ACLS. In short, they are:

- CMCA Online registration form: 4 pages to complete the registration form
- Registration pathway:
  - Create pathway
  - Users and staff are able to see the pathway status
  - Upon the completion of pathway, admin staff can approve the registration
- User access expiry date alert and action:
  - When user’s access expiry date is approaching in less than two weeks, the system shows an alert on the booking page to remind the user to update the registration. Upon update, admin staff receives a notification for further action to extend the access expiry date.
  - If user access date is expired, user access to ACLS is disabled.
- Account selection for bookings
  - If the user holds more than one account, the user must choose the proper account from the dropdown list to continue. So add “Please choose the correct account for booking” to the dropdown list.
- Active users only for booking:
  - We want to set the active users for selection to all the booking tools instead of all users to the current ACLS.
- Search active users by bookings:
  - We want to be able to find out the users who booked a resource during the chosen period of time.
- Apply a special multiplexer to the standard charging rate for the off-business time
  - “We’d like to automatically apply a ¼ billing multiplier to the hours booked from the hours of 5pm to 9am next day, from the current rate applies to the bookings from 9am to 5pm”
  - “We’d like to automatically apply a ¼ billing multiplier to the hours booked, for the following hours:
    - 17.00 Monday until 9.00 Tuesday
    - 17.00 Tuesday until 9.00 Wednesday
    - 17.00 Wednesday until 9.00 Thursday
    - 17.00 Thursday until 9.00 Friday
    - And 17.00 Friday until 9.00 Monday
  - Leaving the full rate at other times, Monday to Friday 9.00 until 17.00
- Build all the reports to display usage hours and charges in terms of business time and off business time
Flow Chart of User Registration Process:

14.1 2018 Requested Changes

- The addition to the Registration pathway page, so all existing users can have meetings to register for future courses. So there will be a new user meeting section and a existing user meeting section (in the existing user meeting section all CMCA users can be seen on the pull down sections) See NUM-EUM.jpg

- On the current NUM for the current modules will be changes a mock up is on the NUM.jpg. All pull down and tick boxes we can edit/change.

- Note the 1.1, 1.2 etc. is only to indicate the location on the page and should not be on the form itself.

To stay the same (First section)

**Additional comments**
14.2 To Set Up Registration Pathway

Registration pathway is a process of approving the user registration request. By default, the system has the first built-in step “Received registration”. Admin staff can amend and add the registration process steps to suit your labs.

Go to System Settings -> CMCA Registration Pathway.

You are able to define the step number for each step. ACLS shows the step order in the pathway.

Pathway Chart

| Step 1 (1): | Electronic application submitted and being processed |
| Step 2 (2): | Academic in charge scheduling the New User Meeting |
| Step 3 (3): | Training and access is confirmed through NUIM |
| Step 4 (4): | Waiting for the signed form to be submitted by the User |
| Step 5 (5): | Signed form received |
| Step 6 (6): | ACLS activated / reactivated and user notified |

To add a new step:
You can have up to 20 steps in the registration pathway.

### 14.3 To Register

According to the requirements, 4 pages of the form are defined and implemented. Users must fill the entire form to register.

**Page 1: Registration**

Users can save a temporary copy for later use. The system keeps the temporary copy for max 14 days.
Appendix F – Modification for CMCA

Appendix F – Modification for CMCA

Upon final submission, users can see the final page.

A short printable registration copy is available as a hard record. If a user signature is required, then it can be printed. Also the registration reference number is shown on the screen and an email notice is sent to the user for their records.

The registration reference number can be used to check the registration pathway status.

A copy of the registration notice is sent to the contact us email defined in “Configure System”. If you wish to add more staff to receive the new user registration request email, you can go to “System Settings” -> “Email Receiver” to set them up.

14.4 Approve Registration

Due to the introduction of registration pathway, to approve the user registration, you need to go to User Profile -> Registration Pathway Manager, and select the user to continue.

On the next page, you are able to see the status of each registration pathway. Until all the pathway is closed, you are able to approve the user registration.
Should you need to contact the user, simply click **Contact User**.

Should you need to access user registration form details, go to “Click to access registration form”. For admin, you are able to update the form details; for staff, you can view form only.

### 14.5 New User Meeting (NUM)

NUM is accessible via **Registration Pathway Manager**. To set up new meeting, click on **New User Meeting** or **Existing User Meeting**.

New user meeting is for the unapproved users. Existing user meeting is for the registered and active users.

You are able to access each NUM records by click on User Meeting Records button.

The NUM form is required to complete for new and existing user meeting. Each NUM form is required to select the user from the dropdown list.

### 14.6 NUM Settings

All the related dropdown list settings can be configured \textit{System Settings}.

Each list set up is the same way, for example, set up CMCA Swipe Cards.
14.7 Set Up Business Time and Multiplexer

Go to **Staff -> System Settings -> Configure System -> Business Hour Settings**.

Weekends are considered as off business time.
14.8 Usage Reports

According to the proposal (ACLS Change of Order (201606-CMCA) – Final.pdf), booking reports and batch reports are modified to include the calculation for business hours and off business hours separately.

A new reporting platform is implemented so you can easily search (or shortlist), export/print to CSV, EXCEL and PDF. This new technique has been applied to all the report tables.

In addition, as the multiplexer is newly added to ACLS, so if you go back to the previous report in batch report mode, then all the business time and off business time calculations are set to 0 as no data are available unless you re-run the batch reports.

14.9 User Registration Form

User registration forms are accessible via each user profile. The new meta data form design is implemented for a polished finish.
14.10 FAQ

1. How can I set up “Funding Source”?  
   This is available to admin only. Go to System Settings -> Funding Sources.

2. How can I set up “Special Requirements”?  
   This is available to admin only. Go to System Settings -> Special Requirements.

3. How can I set up “CMCA Facilities”?  
   This is available to admin only. Go to System Settings -> CMCA Facilities.

4. How can I set up “CMCA Labs”?  
   This is available to admin only. Go to System Settings -> CMCA Labs.

5. How can I set up “UWA Payment Option”?  
   This is available to admin only. Go to System Settings -> UWA Payment Option.

6. How can I set up “Non-UWA Payment Option”?  
   This is available to admin only. Go to System Settings -> Non-UWA Payment Option.

7. Why can’t I approve the registration?  
   The pathway needs to be closed before you can give an approval.

8. Upon approval, can the user access the form?  
   Yes. He can go to User Profile Manager to access his profile, and also his registration form. However, he cannot change the form details.
15 Appendix G – Modification for UTS

This appendix intends to cover the information about changes for University of Technology Sydney to ACLS.

15.1 User Profile Manager (Item 20)

Sorting after search is arranged by alphabetic order of user name instead of user title.

15.2 Customised Resource Fields (Item 3)

A new technique is used to add or remove the new fields for resources by yourself.

**Step 1: Add new customised fields**

Go to Resource Manager, click on Customised Resource Fields to add new fields.

For new fields, you need to enter field name and length of field (max number of characters). Please use letter and digit for field name only.
Upon creating the new fields, you can delete them anytime if they are not in use for any bookings.

**Step 2: Add customised fields to Resource**

You need to confirm if you want to set up new customized fields to any resources for its booking form or for its report respectively. If you don’t tick the relevant boxes, then the new customised fields won’t be effect to the resources.

This is all you need to do for adding customised fields.

**Step 3: Change the customised field order on popup booking window**

You are able to change the customised fields order on the form. Click on “Set Field Order on Booking Window” button to make the changes.
15.3 Customised Resource Fields on Booking Form (Item 3)

The customised fields will show up on the form depending on the resource settings. Please note that all the customised fields are compulsory entry. Without the data entry, the bookings won't be accepted.

15.4 Customised Resource Fields on Report (Item 4)

Go to Report Manager, a new report tile is added for the resources which have the customised fields enabled. By doing so, the standard reports remain unchanged.

ACLS shortlists the resource groups (that are enabled with the customized fields) for selection.
The monthly report example is shown here. You can export to EXCEL anytime.

Please note that vehicle charge capping is not implemented. You can export to excel for the further data process.

Reports by any periods are available for the customised field resources and resource groups.
Appendix H – ACLS Tracker with ACLS Server

ACLS Tracker aims to provide a client/server solution to record the actual resource/instrument/equipment operation time by users. Through the ACLS Tracker, you can implement more secure access to resource/instrument/equipment by the “No Login, No Operation” policy.

When a user comes to use equipment, they need to login at the equipment computer through the ACLS Tracker. Tracker checks if the user has a valid account, if the user has a valid certificate to operate the equipment, and checks against bookings (optional). During the period of operation or experiment, a user can submit experimental notes, or send in an Incident Alert (future version).

Tracker operation guide can be found at http://www.analytical.unsw.edu.au/for-users/ac-lab-system/acls-tracker-download
To establish a dynamic network data drive connection, you need to set up a Data Server to store and share experiment data with users. A single Windows share folder set up is sufficient on the data server. When a user logs in, the tracker communicates with the ACLS server to obtain full authentication information to make the network data connection; and when they logout, it disconnects the network drive.

This enables you to reset the network drive connection password regularly for security reasons.

- **Process of network drive connection:**
  - Tracker login
  - Tracker requests network drive settings
  - Tracker connects to network drive according to the settings in ACLS system, for example, drive “M”, IP of the data server, etc.
  - When successfully connected, the Tracker renames the map drive using the name defined in the settings in the ACLS system
  - Tracker logout
  - Tracker disconnects the network drive

- **Case #1: Set up network shared folder in Data Server**

Assuming that you have a Windows data server or computer with IP address “10.1.1.1”, two local drives are available, C and D. On D Drive, create a folder named “results” and then set up sharing to this folder over the network. You then add password protection to this shared folder “results”, for example, abcdefg, and user name as “mydata”.

When you connect or map to this shared folder on other computers, you need the following information:

- Folder destination: \\10.1.1.1\results
- User name: mydata
- Password: abcdefg
Case #2: Set up network shared folder

Using the information from Case #1, you now need to configure ACLS to the network drive through the web interface.

The following checks and set up are required when you logon to ACLS web interface:

- **“System Settings” -> “Configure System”:** To turn on “DataStorageCtrl” parameter

![DataStorageCtrl](image)

- **“System Settings” -> “Configure Data Links”:**

  - Net Drive Settings: You need to define the following parameters for the console to connect to the network drive as follows:

    ![Links & Directories](image)

    - Drive: tells the console what drive label is used for connection, don’t use C to G as most Windows computers take them for local drives
    - Folder: as a protocol of network drive mapping, you should set out the full path as standard
    - User Name: authentication of connection
    - Password: authentication of connection
    - Per Resource: this is optional, you can set up an individual folder connection for each individual equipment or resource listed in **Resource FTP Access Directory**.

Case #3: Set up individual network shared folder for each resource

Continuing with Case #2, go to **Resource FTP Access Directory Settings** to set up individual resource folder connection. The individual resource folder setup is optional depending on your preferences.

For example, instead of saving data to the root directory, such as `\129.94.150.15\emunit`, you can go further and set up each individual resource folder to make future data sharing and archiving clear and easy, such as `\129.94.150.15\images\afm`. 
Here is an example of this setup:

### FACILITY FTP ACCESS DIRECTORY SETTINGS

</tbody>
</table>

ACLS takes “Physical Directory” setting and keeps “afm” for example to conjunct with \129.94.150.15\emunit set out in ‘Net Drive Settings’.

- Case #4: Set up individual user folder in the network shared folder

Continuing with Case #2, through ACLS, you can set up an auto-added user folder feature so that you can save results or datasets to their own data folder on the connected network drive.

To achieve this, you need to map the same drive to the ACLS server, and establish the same settings as for the ‘Physical Directory’ in Case #3. When receiving the request from the console, the ACLS server adds a user folder with their login name. When the user logs out at the console, the server also checks if the folder is empty. If so, then the folder is removed.

The obvious benefit is that you can easily archive the data in those inactive user folders and just keep the active user folders, reducing storage space. Please contact us if you wish to do this.
Appendix J – About LDAP Implementation

18 Appendix J – About LDAP Implementation

The Lightweight Directory Access Protocol (LDAP) is an application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network.

What is the implication of LDAP implementation?

It means that you can achieve a single authentication access for ACLS in your organization. For example, we run 11 copies of ACLS at UNSW, with LDAP a researcher can simply use one university-wide login ID and Password to access ACLS regardless of which ACLS copy they intend to access.

The benefits of ACLS LDAP:

- Single logon on if you run multiple ACLS to different labs on the same campus
- Authentication control is managed at university level instead of at local ACLS
- Org file system access: researchers can access their home drive through ACLS LDAP (not part of LDAP module)

To establish LDAP, you must run a connection test between ACLS and LDAP service at your organization.

Go to System Setting -> Configure System, then scroll down to the bottom of the page and click on LDAP Setting button.
Appendix J – About LDAP Implementation

To make LDAP work, you need to seek help from your local IT service to set up the following LDAP parameters:

- **Active Directory Domain Name**: the domain name for LDAP server, or IP address
- **LDAP Enable**: check the box to turn on LDAP in ACLS
- **LDAP Login Prefix**: depends on your local LDAP configuration, for example, some may need a prefix to form the login format as adunsw\z0000000. So your entry is adunsw in this example

Before turning on LDAP in ACLS, please click on “LDAP Connection Test” to confirm LDAP is working.

If LDAP connection is successful, then you can see a return message “SUCCESS”.

You can easily check the LDAP status of each user and staff by clicking on LDAP User Status. A full status information table shows up as below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active Directory Domain Name</td>
<td>ad.unsw.edu.au</td>
</tr>
<tr>
<td>LDAP Enable</td>
<td>(Please do the LDAP connection test before switching on LDAP!)</td>
</tr>
<tr>
<td>LDAP Login Prefix</td>
<td>adunsw</td>
</tr>
</tbody>
</table>

LDAP Settings
Appendix J – About LDAP Implementation

To migrate ACLS from non-LDAP to LDAP, you need to pre-configure the user LDAP setting by clicking on **LDAP Pre-Configure**.

In addition, through a keyword check mechanism, you can lock local staff and users to access ACLS through LDAP only. In other words, once you switch on LDAP to those who are local staff and users, their access to ACLS is subject ONLY to the organization ID system check.

For example, at UNSW, local staff and students must use their zID/zPass to access ACLS. zID/zPass is an universal authentication ID system at UNSW.

To make this work, you need to provide the keywords to ACLS through **Configure System**:

```
LDAPCompulsoryCheckText  unsw
```

Once the system detects this setting, then it locks up any users’ access whose email address contains this key text string. For example, in the above example, “unsw” is the keyword to search for lock up and any users who have the email address `xxx@unsw.edu.au` are subject to this lock up. In other words, they must access ACLS through the UNSW ID system.
19 Appendix K – Single Sign-In Portal (SSI)

SSI aims at achieving a single access point to the trusted ACLS nodes. SSI is useful for multiple ACLS nodes access at university or organization level to replace multiple individual ACLS access. The diagram below demonstrates the concepts of SSI:

SSI supports the following authentications:

- ACLS local authentication
- LDAP authentication
- AAF authentication

AAF stands for Australian Access Federation which provides a single access authentication process for all Australian universities and government bodies. The advantage of AAF is that users can access ACLS with its own organization Uni-Key and Uni-Pass as long as they are registered in ACLS.

ACLS and AAF working mechanism is illustrated here.

The institutes/units/centres/labs which need to provide multiple-universities service can benefit from the AAF integration, no additional costs to implement ACLS and AAF integration as long as you are ACLS customers.
19.1 SSI Prerequisites

The following steps are recommended to set up SSI:

- Install and configure 64 bits server (VM or physical) to host SSI on Windows OS 2012
- Install IIS
- Install PHP engine to IIS
- Install PostgreSQL ODBC driver
- Configure Windows ODBC connection to ACLS SQL server

19.2 Deploy SSI

As SSI is written and run on PHP scripts, we provide the service to customize the scripts to meet your needs. Please contact us for assistance.
19.3 SSI Working Examples

Access Nodes:

- Biomedical Imaging Facility
- Bianalytical Mass Spectrometry Facility
- Biological Resources Imaging Laboratory
- Electron Microscope Unit
- Flow Cytometry Core Facility
- Nuclear Magnetic Resonance Facility
- Spectroscopy Laboratory
- Solid State & Elemental Analysis Unit
- Biological Resources Centre
- Molecular Surface Interaction Network Laboratory
19.4 Enable SSI for ACLS Node

It is easy to configure ACLS node for SSI deployment. Go to Configure System page and set up the following parameters **Access Portal URL**.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
</table>

Next, you check the box to the parameter **Enable Single Sign In**.

Upon enabling SSI, the ACLS own login page is switched off as users must sign-in via SSI.

19.5 Catalogue Resources

In the previous chapters, 4 access controls are described to manage the resource catalogue access.

- Local
- Organisation
- Universe
- Disable
19.6 Organisation Charts

Organisation charts are available in SSI as snapshots here.
Appendix K – Single Sign-In Portal (SSI)

AC LAB SYSTEM
Appendix L – Central Finance Integration

This feature provides account or general ledger code validation against the organization central finance records. The major drive for this implementation is to reduce the account code errors in ACLS so to reduce the central finance journal errors.

Here are the steps and details to run the weekly central finance record updates and the ACLS validation change process at UNSW.

- **UNSW Finance**

  UNSW finance sends in the finance account records in Excel to the designated admin staff once a week as a scheduled task configured in PeopleSoft. The point of contact at finance is Melissa Yau, her email is m.yau@unsw.edu.au.

- **Convert EXCEL sheets to CSV format**

  Lab admin opens the sent-in finance records sheet in MS Excel and save it as CSV (MS-CSV) format, the file name remains unchanged.

- **Upload and Publish**

  Login to ACLS SSI or ACLS Account Manager to upload the finance record csv file and publish to ACLS account book.
Go to **Account Manager**, open UNSW Finance Account to access the stored finance account details. The loading of the entire finance records might take a minute, there are over 30,000 active finance ledge codes.

Click on Build Account Correction Table to continue, system auto-picks the suspicious accounts for editing or updating. If there are no matching records found in the finance records, then you edit the account. If there is close-call matching results, you can update the current account name with the correct account name as indicated in the table.

It is admin staff call to edit, update or leave as it is. System checks any new account creation against organization finance account records to minimize the unwanted or human errors so to reduce finance system journal processing loads for using the unidentified or expired accounts.
Lab admin expects to run the account correction once week against the central finance records.

- **User Registration**

If you enabled account entry for user registration form, system does the account validation in the registration form before even submitting the form. By doing so, that really free lab admin from the future account validation workload.

System is able to prompt the user for the similar account for the minor errors.
### Weekly Exception Alert

System runs weekly exception checks on each Sunday morning, and send the account exception alerts to the lab admin for the further actions.

Should you wish to implement this feature for your ACLS, please contact us for assistance.
